

Investment Opportunity

April 2020

Company Purpose

We believe that connecting financial institutions together digitally is critical to the proactive management of **Operational Risk** and that this technology network creates a scalable, defensible and profitable business

"The risk of loss resulting from inadequate or failed internal processes, people and systems or from external events."

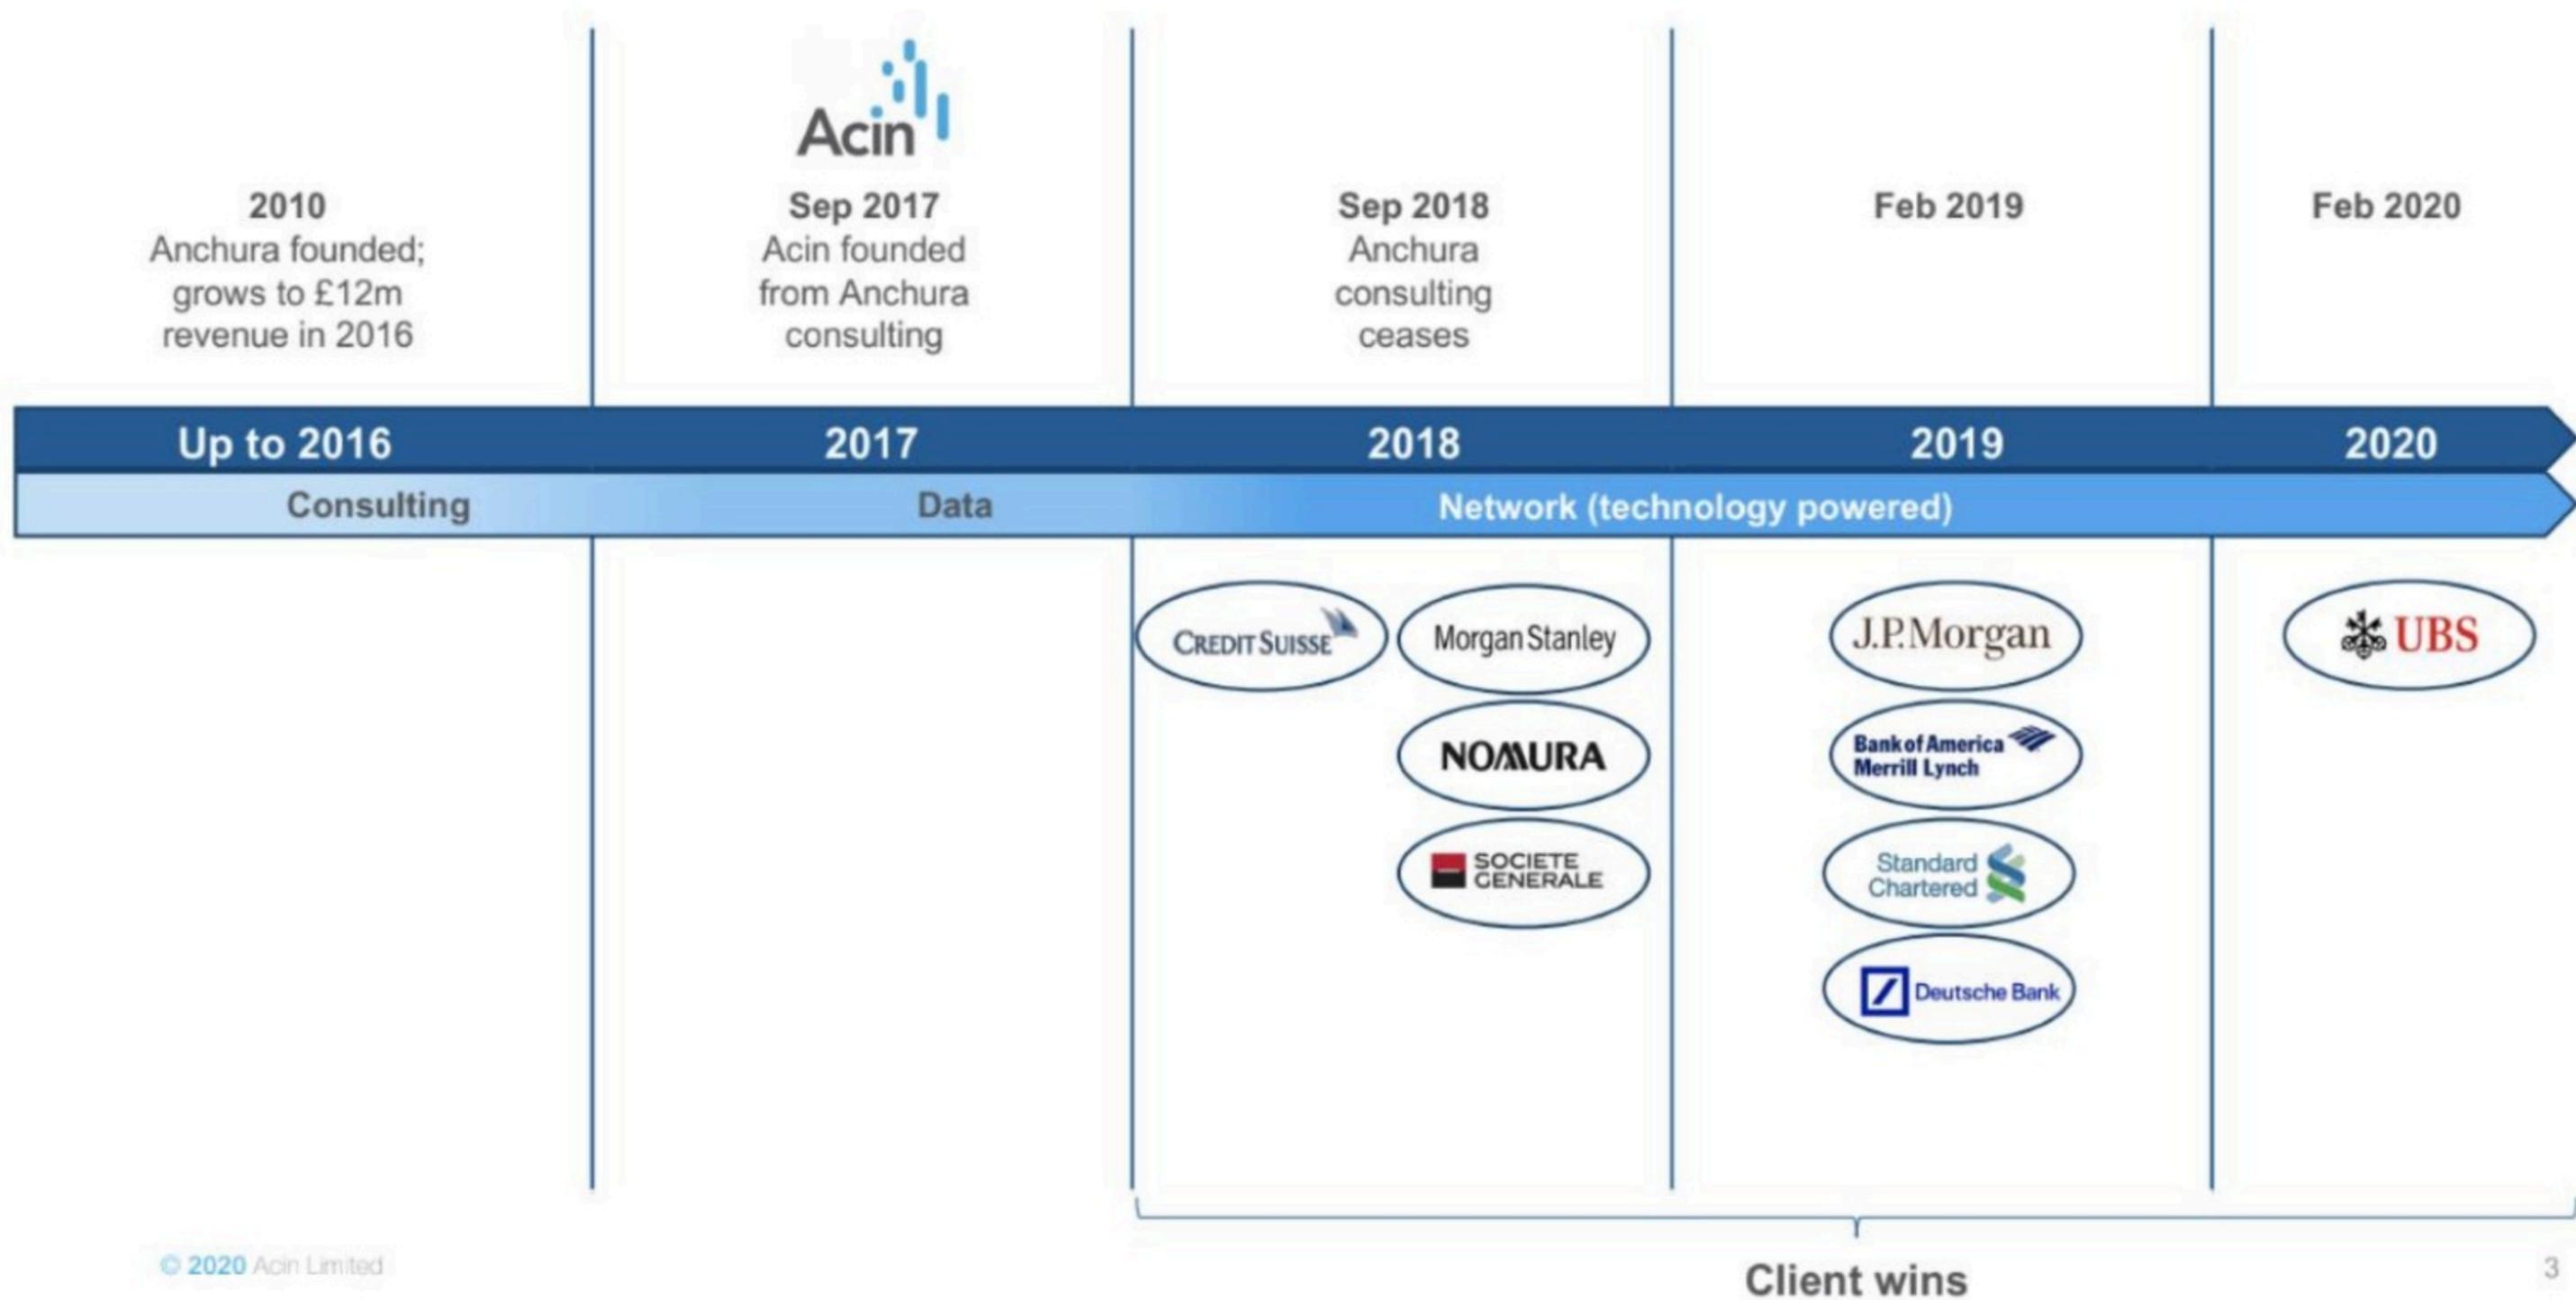

The Basel Committee on Banking Supervision definition of Operational Risk (also known as non-financial risk)

"I have seen Operational Risk rise in significance. I've always wondered what it would take to turn it into an engineering discipline – Acin answers my question."

Cris Conde (Former President and CEO, SunGard)

Evolution

Acin has Transitioned from an Operational Risk Consultancy to a SaaS and Data Subscription Network Serving Tier 1 Financial Institutions

Operational Risk Definitions

Key Focus of the Basel Committee on Banking Supervision

Defined by Basel II

Defined by FCA

Definition of Operational Risk

"The risk of loss resulting from inadequate or failed internal processes, people and systems or from external events" – Basel Committee
Sometimes known as "non-financial risk"

Classification of Operational Risks

Banking Business Lines

Corporate Finance	Sales and Trading	Retail Banking	Commercial Banking
Payments and Settlement	Agency Services	Asset Management	Retail Brokerage

Plus interdealer brokers, venues, exchanges, clearing houses, insurance

SM&CR

Senior Managers and Certification Regime – an FCA regulation
Applies to UK banking sector and insurers; intended to reduce financial service consumer harm and strengthen market integrity by making individuals accountable for their conduct and competence

Acin Code

Each control instance utilises a unique identifier, the Advanced Control identification Number (ACIN) code which enables the mapping of risks and controls and drives the network interoperability – it is effectively the 'barcode for risk & controls' and this unique code drives the network standardisation and analytics

Operational Risk – The Problem

A Complex, Opaque Area Which is Costly for Organisations

	Regulatory focus	Remains a focus area and SM&CR creates personal liability for senior managers
	Opaque picture	Being in control cannot be proactively demonstrated, challenged, objectively measured and reported
	Organisational challenges	Organisations are continuously re-inventing the wheel and not leveraging collective industry knowledge
	Complexity	Up to 100,000 risks and controls per Financial Institution This risk and control data is itself not in control
	Manual processes	Non-standardised, Excel-based, no data lineage. Risk and Control Self-Assessment (RCSA) inefficient today
	No context	Standalone assessments – duplicative work with no standardisation or benchmarking
	Not a strategic tool	Controls data as an asset (e.g. reference, thematic, rating, incidents, losses) cannot be tagged and used as a tool

Getting it wrong is costly...

\$150bn p.a. gross losses
ORX Banking Loss Report, 2018

\$376bn in fines since 2012
AFME, Apr 2018

\$26bn annual regulatory costs
AFME, Apr 2018

\$411bn OpRisk capital top 30 banks
Sands, Liao, Ma (2016)

... but banks do keep getting it wrong

Operational Risk Challenges

Regulators Still Remain Very Focused on Risks and Controls

“firms were less able to demonstrate that senior management had clear sight and control of the conduct risks presented by the front office in terms of conflicts of interest or more serious issues around market abuse, such as a rogue trader, or potential market manipulation”

FCA, Sep 2015

May 2019

Nov 2019

Nov 2019

Nov 2019

Mar 2020

“What proactive steps do you take as a firm to identify the conduct risks inherent within your business?”

“What support does the firm put in place to enable those who work for it to improve the conduct of their business or function?”

“Progress and challenges” – 5 Conduct Questions, Industry Feedback for 2018/19, FCA, May 2019

The Acin Terminal

The Acin Terminal has been designed to help our clients solve some of the many non-financial risk challenges that they face

Data Management

Structure and manage your data to unlock the power of the Acin Network and stay aligned to the latest industry thinking.

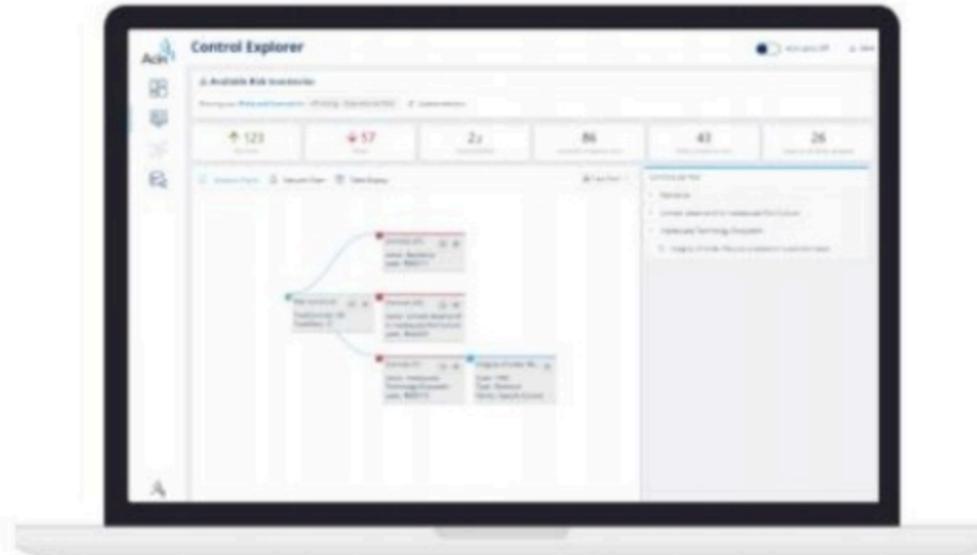

Data Architecture

Align your risks and controls data around a standardized architecture to facilitate cross-industry comparison and interpretation.

Risk & Control Explorer

Interrogate and visualize your non-financial risk and control landscape to understand relationships and alignment to the rest of the network.

Risk Intelligence

Analyse how prepared your business is to respond to industry incidents, common risk scenarios, regulatory changes and other events.

Benchmarks & Analytics

Visually compare how you perform against your competitors and identify the non-financial risk and controls gaps across the industry.

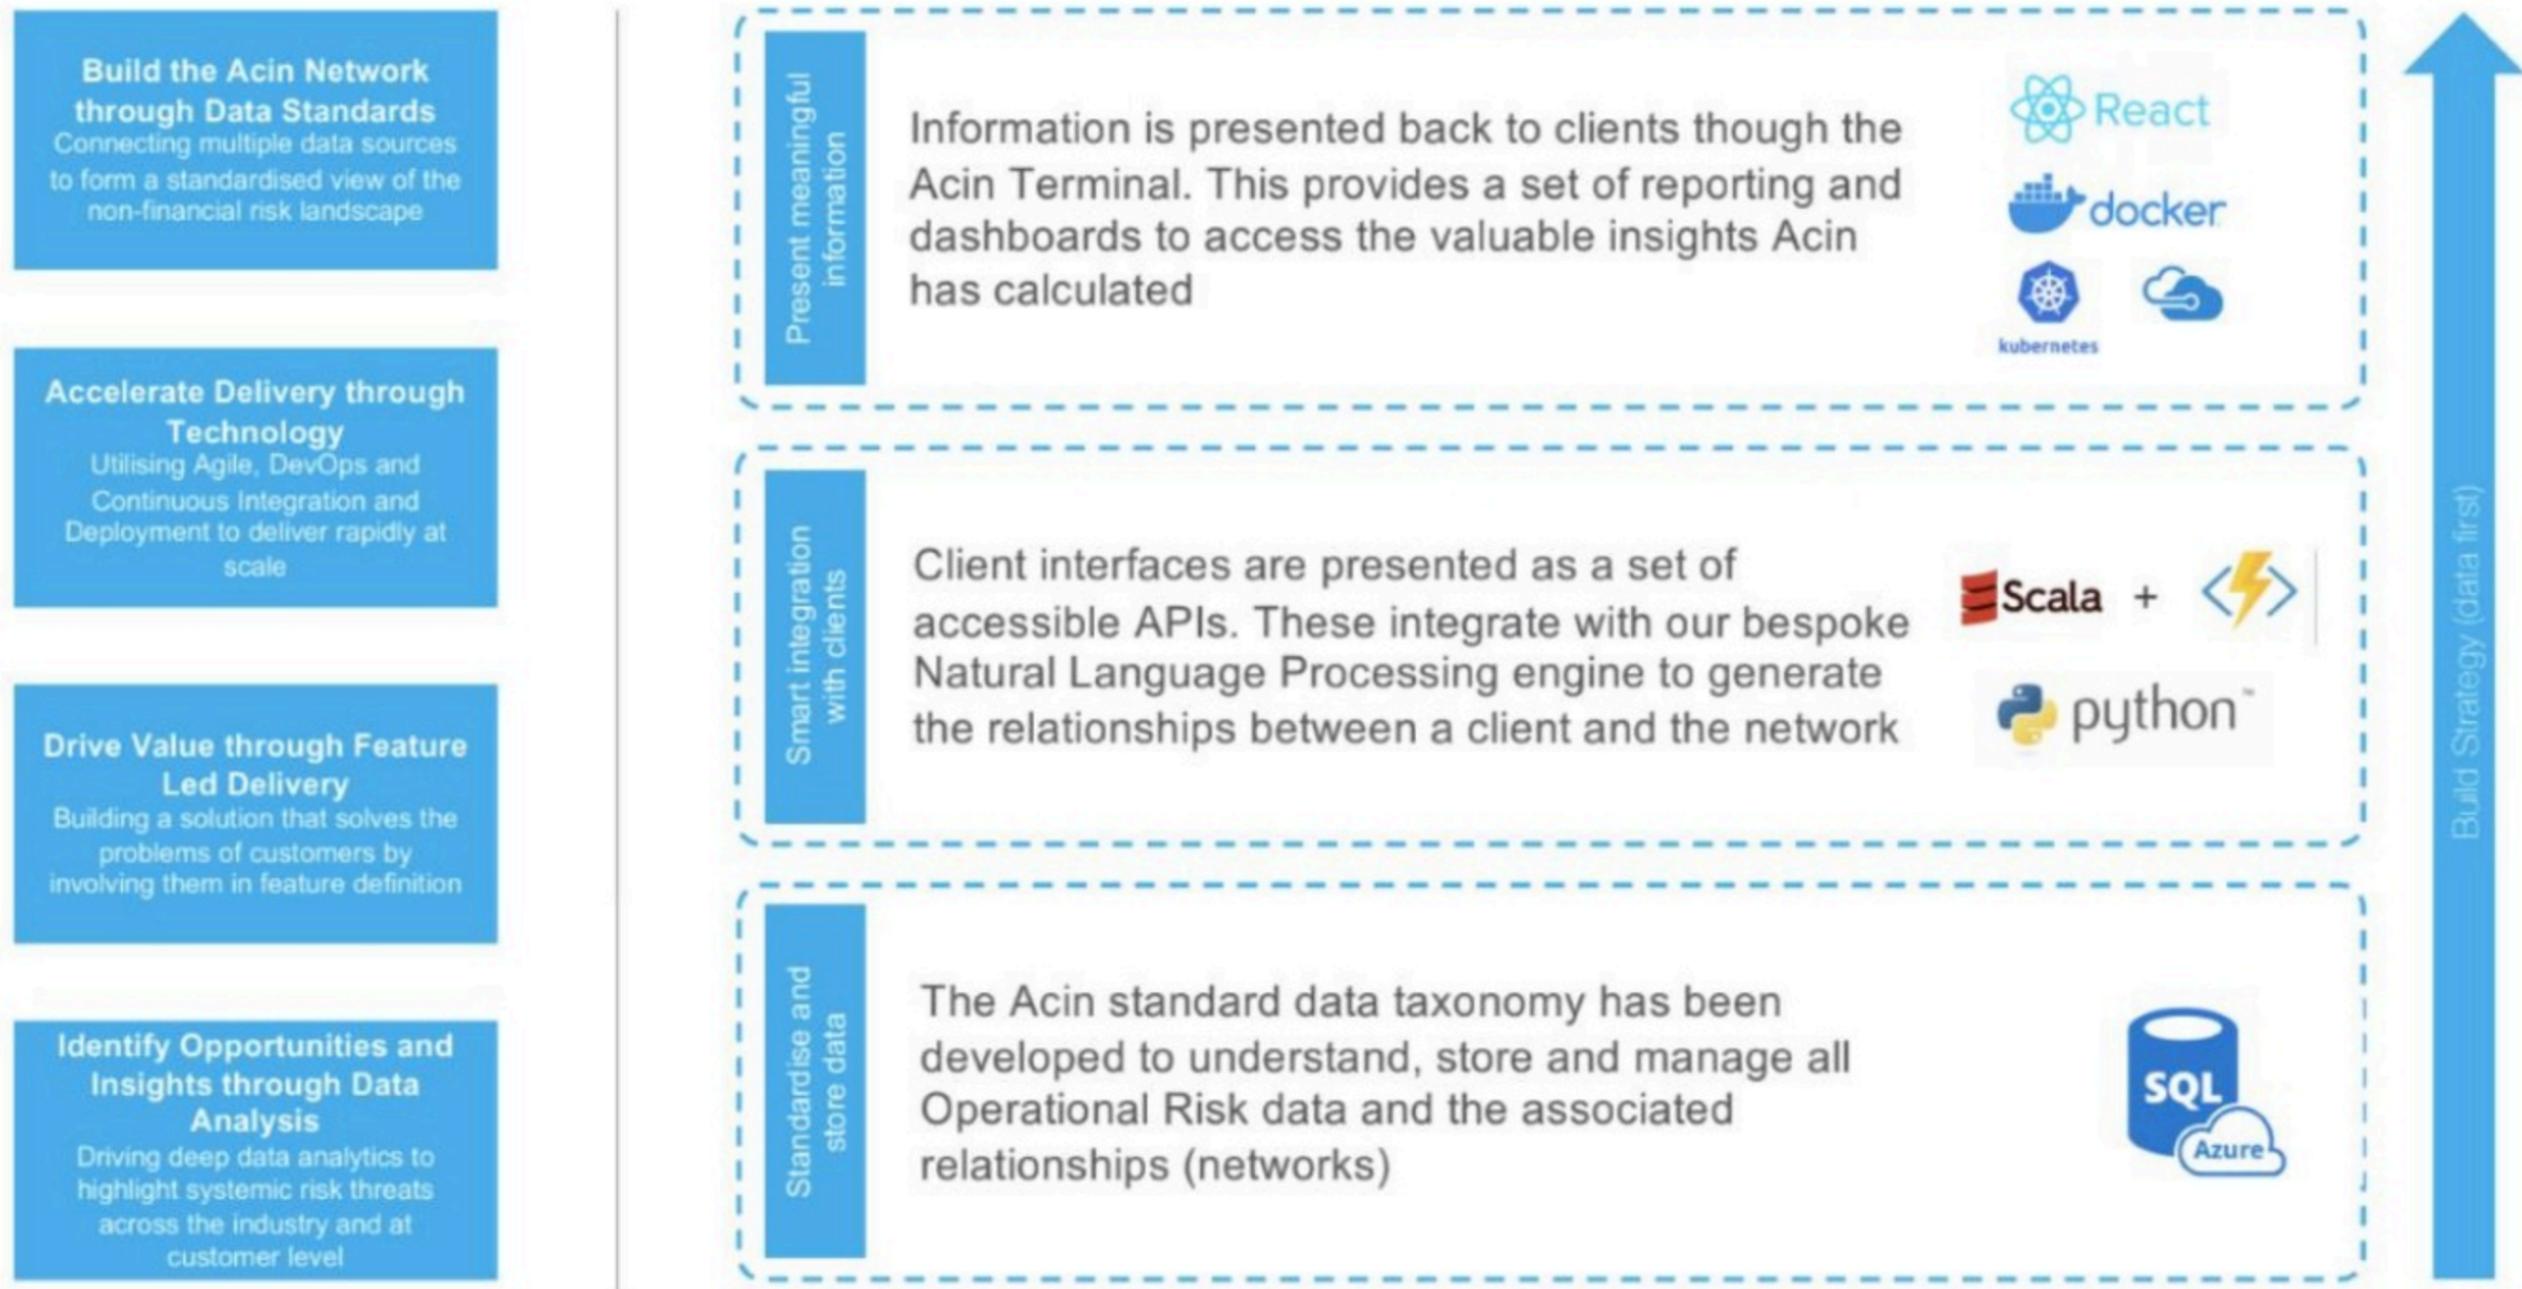

Risks and Controls Content

Identify and adopt market leading risks and controls curated by industry experts and validated by members of the Acin network.

The Acin Platform

Data-First Build Strategy Delivers an Easy-to-Use Platform for Use Across Organisations

Benefits to Clients

Transformation of the Risk and Control Environment

More effective control environment

- ✓ Lowers the number of incidents and therefore lowers fines and losses

More efficient control environment

- ✓ Delivers operational cost savings

Systematically maintaining control and creating transparency

- ✓ Produces transparency, operational cost savings and drives effectiveness and efficiency

Demonstration of control to regulators

- ✓ Quantitative evidence and real-time independent peer benchmarking

Peer collaboration and network effect

- ✓ Context and ability to use as strategic tool
- ✓ Real-time risk intelligence and assurance
- ✓ Risk identification ensures no unknown unknowns that are known to peers/industry

Client Case Studies

The Acin Solution Identifies Significant Risk/Control Deficiencies – Allowing for Reinforcement Action and Improved Efficiency and Reporting

	% Missing vs. Acin Standard	Gaps Identified	Top 3 Areas of Risk	Key Findings	No. of Acins
Bank 1	 32%	<ul style="list-style-type: none"> • 24 Key controls missing • 26 Key risks missing • 90 Metrics missing 	<ul style="list-style-type: none"> • Unauthorized trading • Third party • Cyber risk 	<ul style="list-style-type: none"> • Significant gaps to the Acin database with missing risks and controls • KPIs for controls missing across the board 	45
Bank 2	 55%	<ul style="list-style-type: none"> • 8 Key controls missing • 15 Key risks missing • 134 Metrics missing 	<ul style="list-style-type: none"> • Unauthorized trading • Infrastructure • Product defect 	<ul style="list-style-type: none"> • 55% of duplicates, in excess of 400 controls • 14% controls without description • Missing core attributes incl. metrics, control family, owner 	163
Bank 3	 48%	<ul style="list-style-type: none"> • 11 Key controls missing • 7 Key risks missing • 134 Metrics missing 	<ul style="list-style-type: none"> • Rogue Algorithms • Infrastructure • Risk culture 	<ul style="list-style-type: none"> • Absence of control metrics • Control description often weak 	333

The Acin Solution

Acin is a Technology Solution to Identify, Manage, Benchmark and Analyse Operational Risk

Data

- All relevant data is recorded in a structured manner, enabling strategic insights to be drawn
- Platform reduces number of manual processes required to identify and track risks
- Acin sets data protocols and standards in consultation with participating Financial Institutions

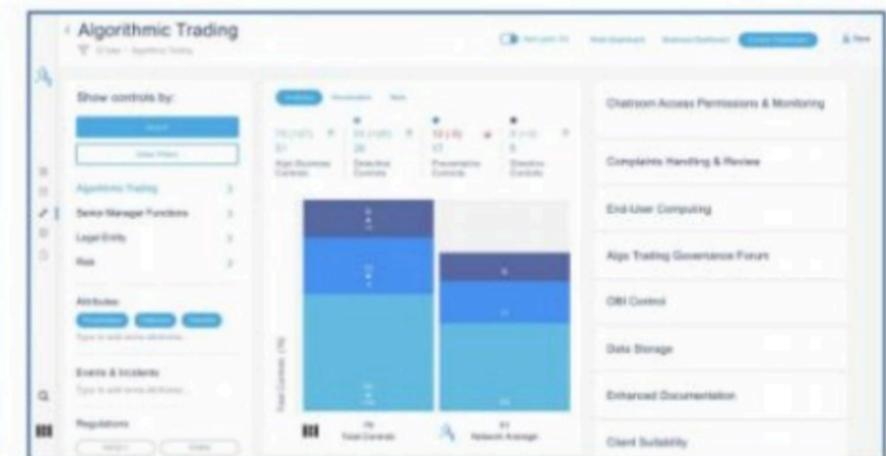

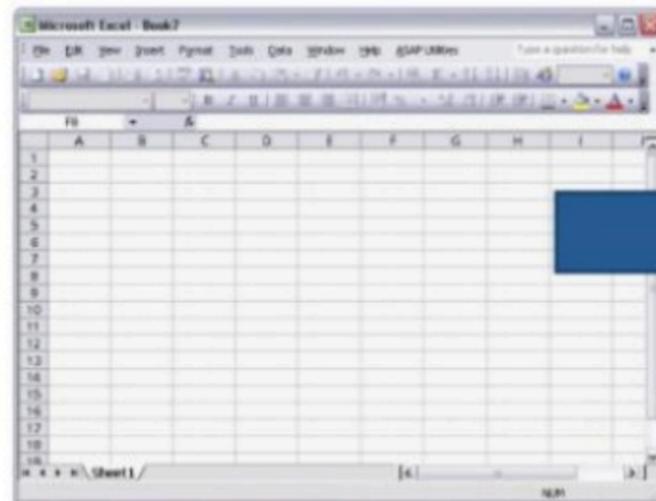

Network

- Risk intelligence is shared between client firms in network i.e. a risk known to one member of network is known to all
- Acin serves as the network hub and controller

Benchmarking

- Acin benchmarks clients' risks and controls against peers, scoring their effectiveness and efficiency
- Report is provided alongside clear steps to address weaknesses found

Risk Intelligence

Regular risk intelligence reports are produced by the Acin team using network data

Colocation/WFH (Covid-19)

- Supervision & Surveillance
- Data-driven Networked-assurance on a specific **Risk Scenario**

Vendor / 3rd Party Controls

- SEBI incident
- Data-driven analysis of a **new risk**

Preventative Control Analysis

- eTrading control automation
- Data-driven Network-assurance on a specific **Regulator Enquiry**

Recent Examples

Resiliency & Disorderly Trading

- eTrading businesses
- Data-driven Networked-assurance on a specific **Risk Scenario**

Front-Office Supervision

- eTrading & high touch businesses
- Data-driven Networked-assurance on a specific **Theme**, incl. mapping to FMSB

MS TRL Marking Incident

- eTrading businesses
- Data-driven Networked-assurance on an **Incident**

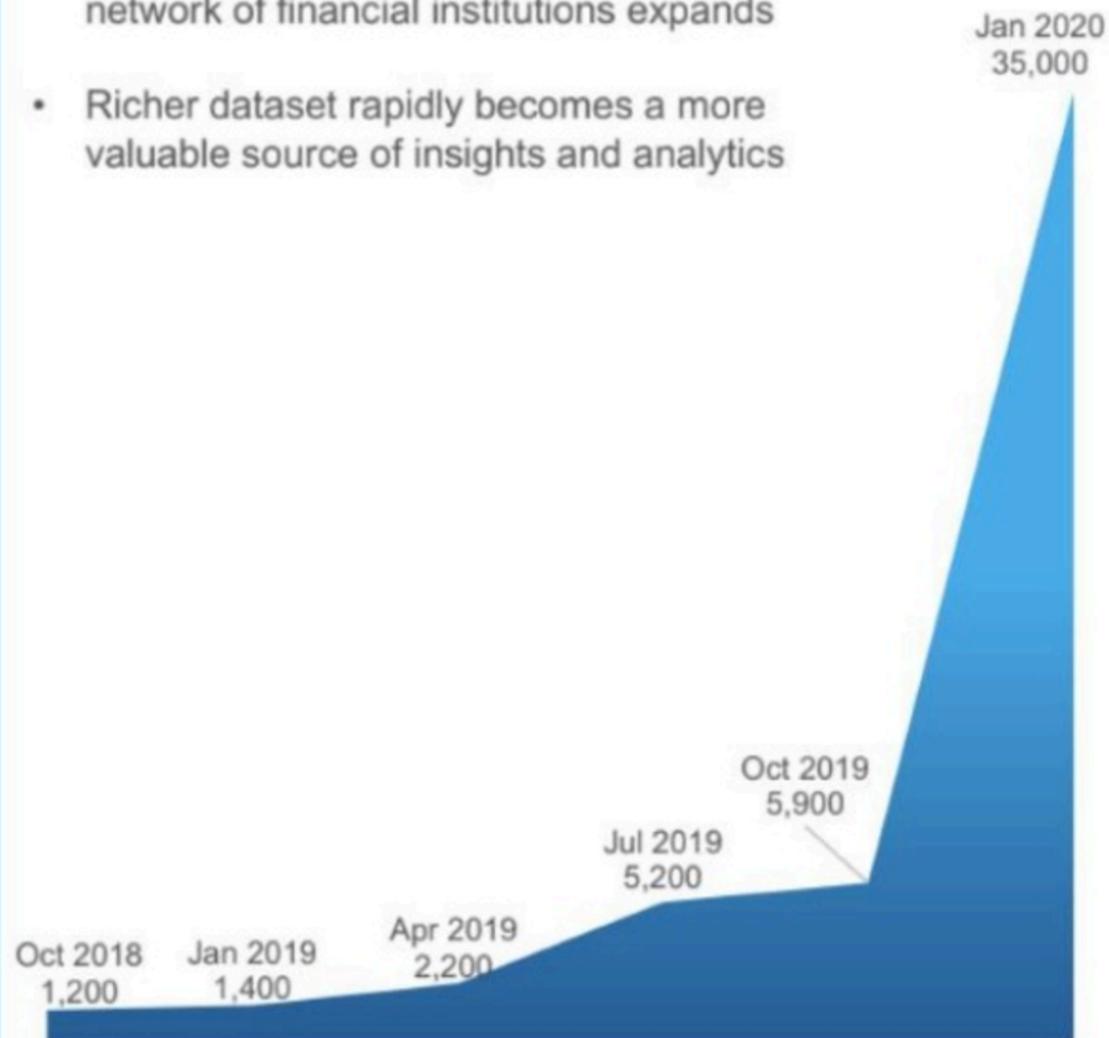

Data Growth Drives Control Optimisation

Ability to Drive Entire Sector to an Optimised, Standardised Environment

Scaling in Unique Control Identifiers...

- Acin dataset is growing exponentially as the network of financial institutions expands
- Richer dataset rapidly becomes a more valuable source of insights and analytics

... Drives Network Insights for Clients

- Acin is enabling clients to optimise their risk and controls individually
- This network improves the whole industry
