The browser is the most widely deployed application in the enterprise

Only its not an Enterprise Application it's a consumer application. It was created to integrate with content providers and advertisers not Enterprises.

The result has forced organizations to surround it with numerous control solutions like

Agents, proxies, gateways, and VDI just to get some tolerable form of last mile control.

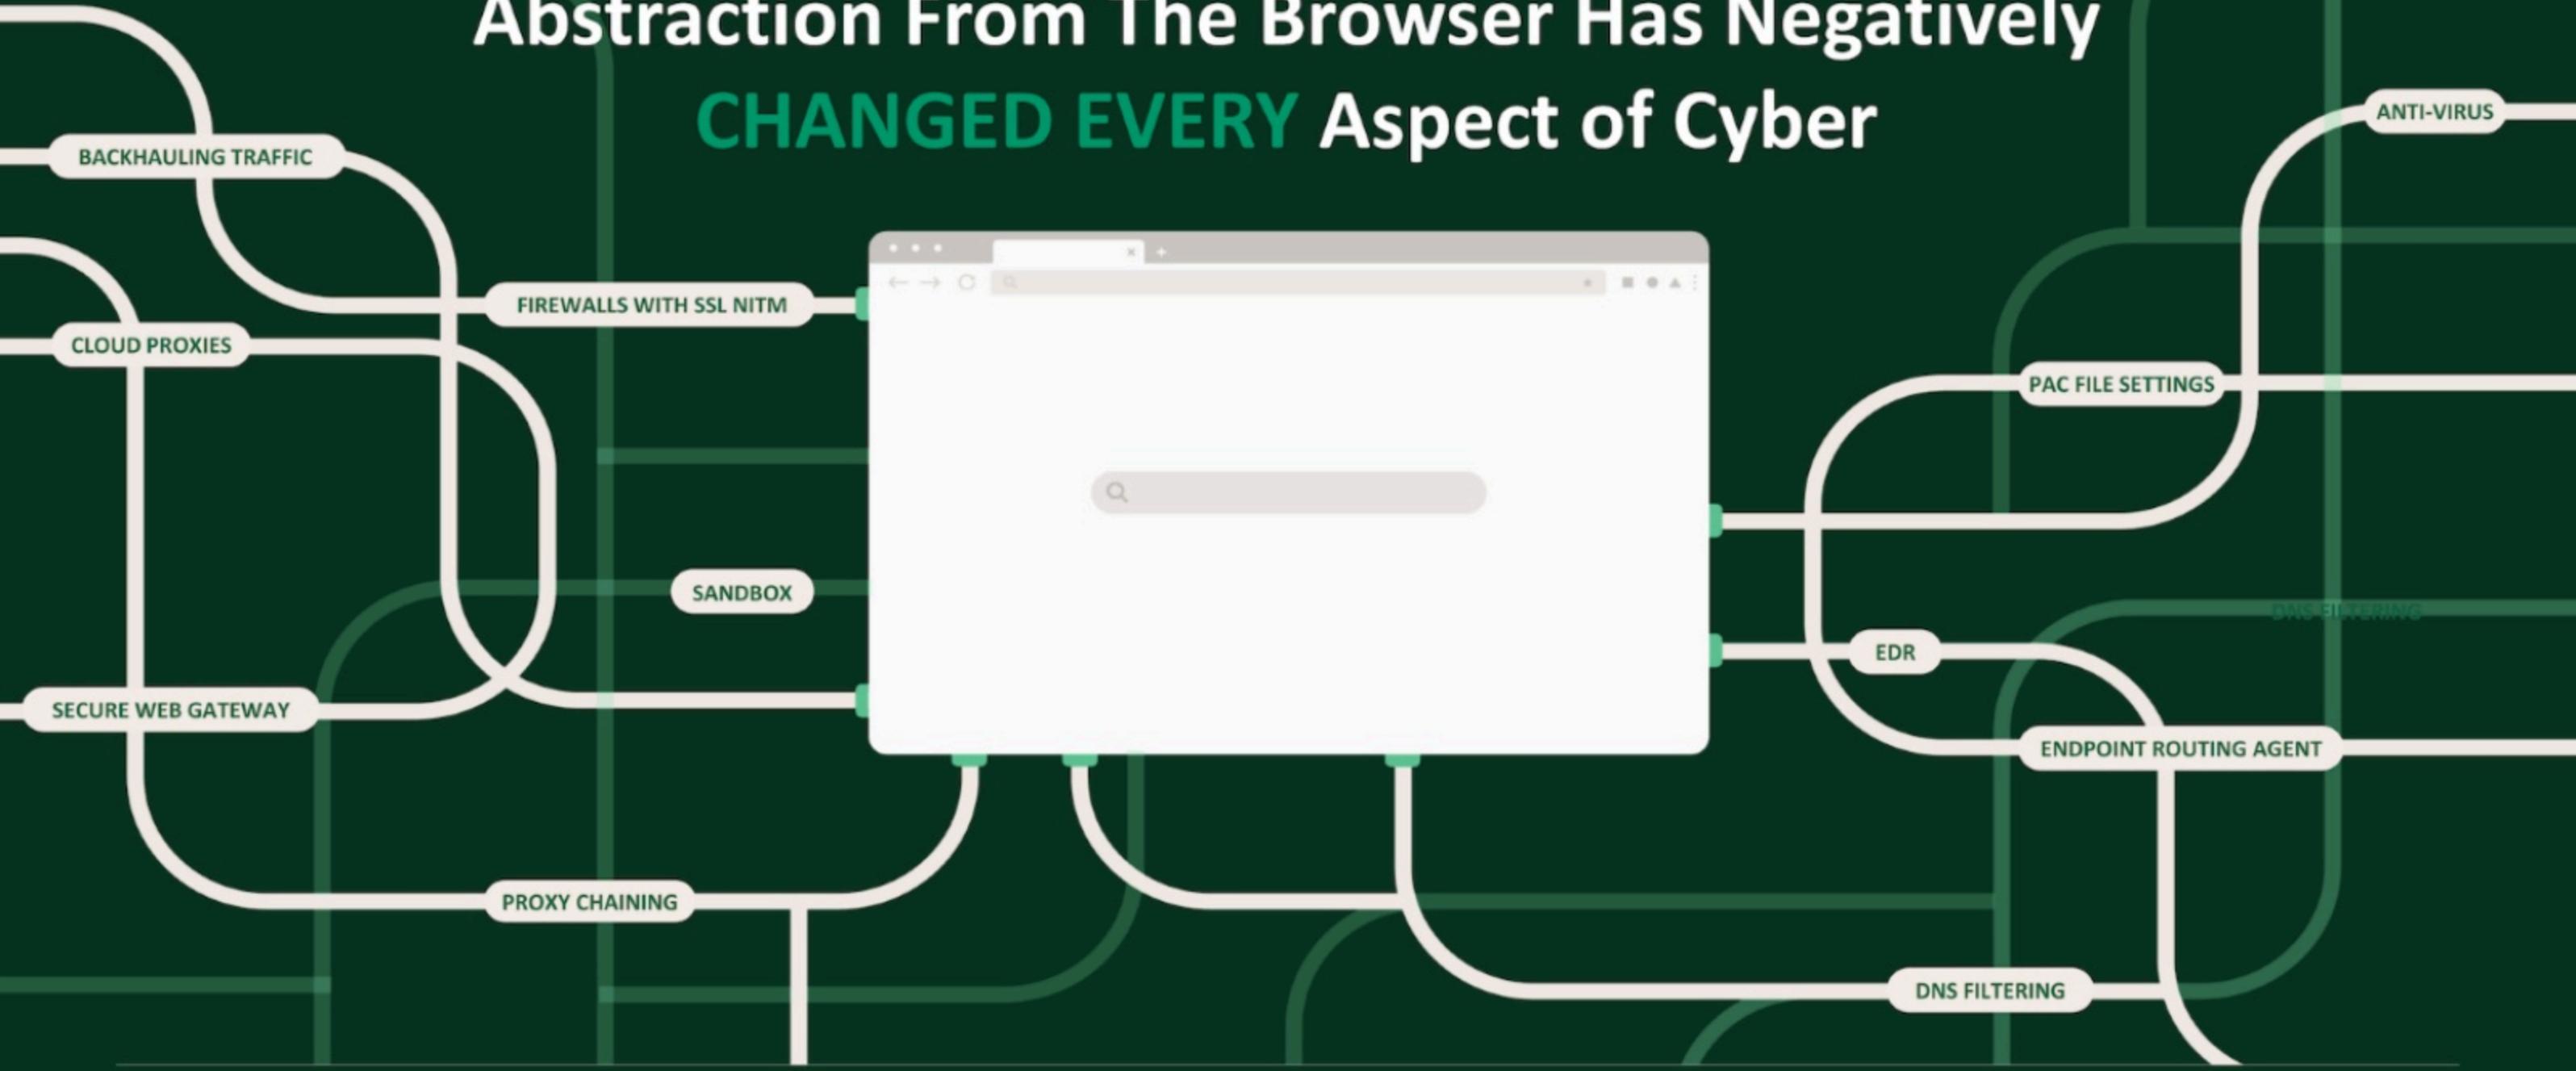

And in the process, our workflow gets interrupted, costs go way up, security stack gets way out of hand, and end user experience gets ruined just to make work happen.

This is not the future of work....

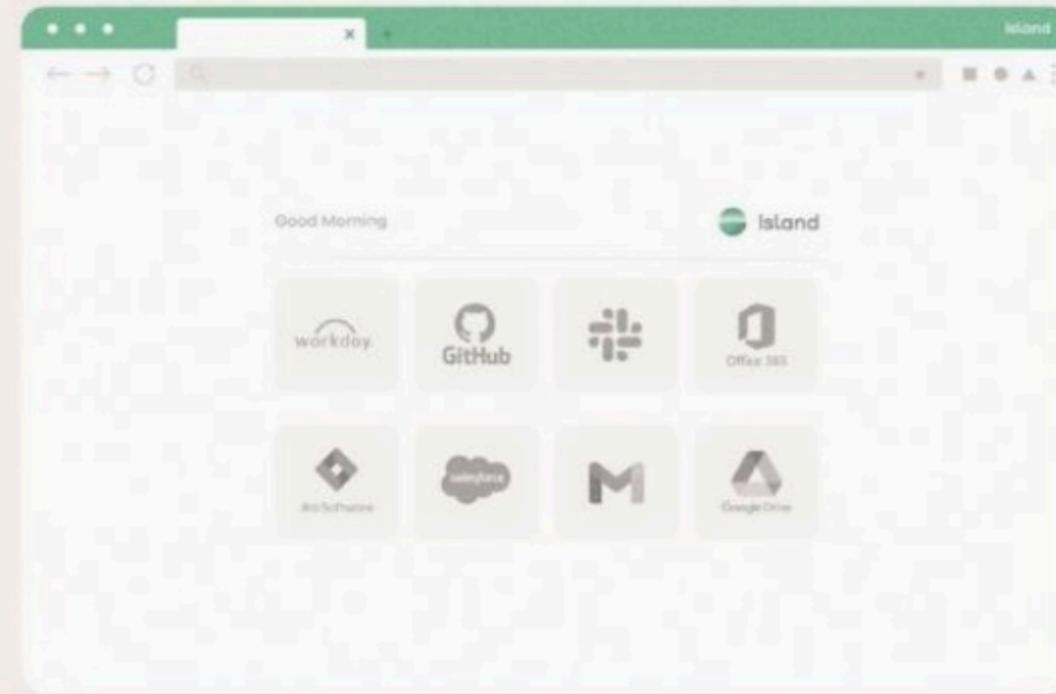

SECURITY BY DESIGN?

Abstraction From The Browser Has Negatively **CHANGED EVERY** Aspect of Cyber

Introducing

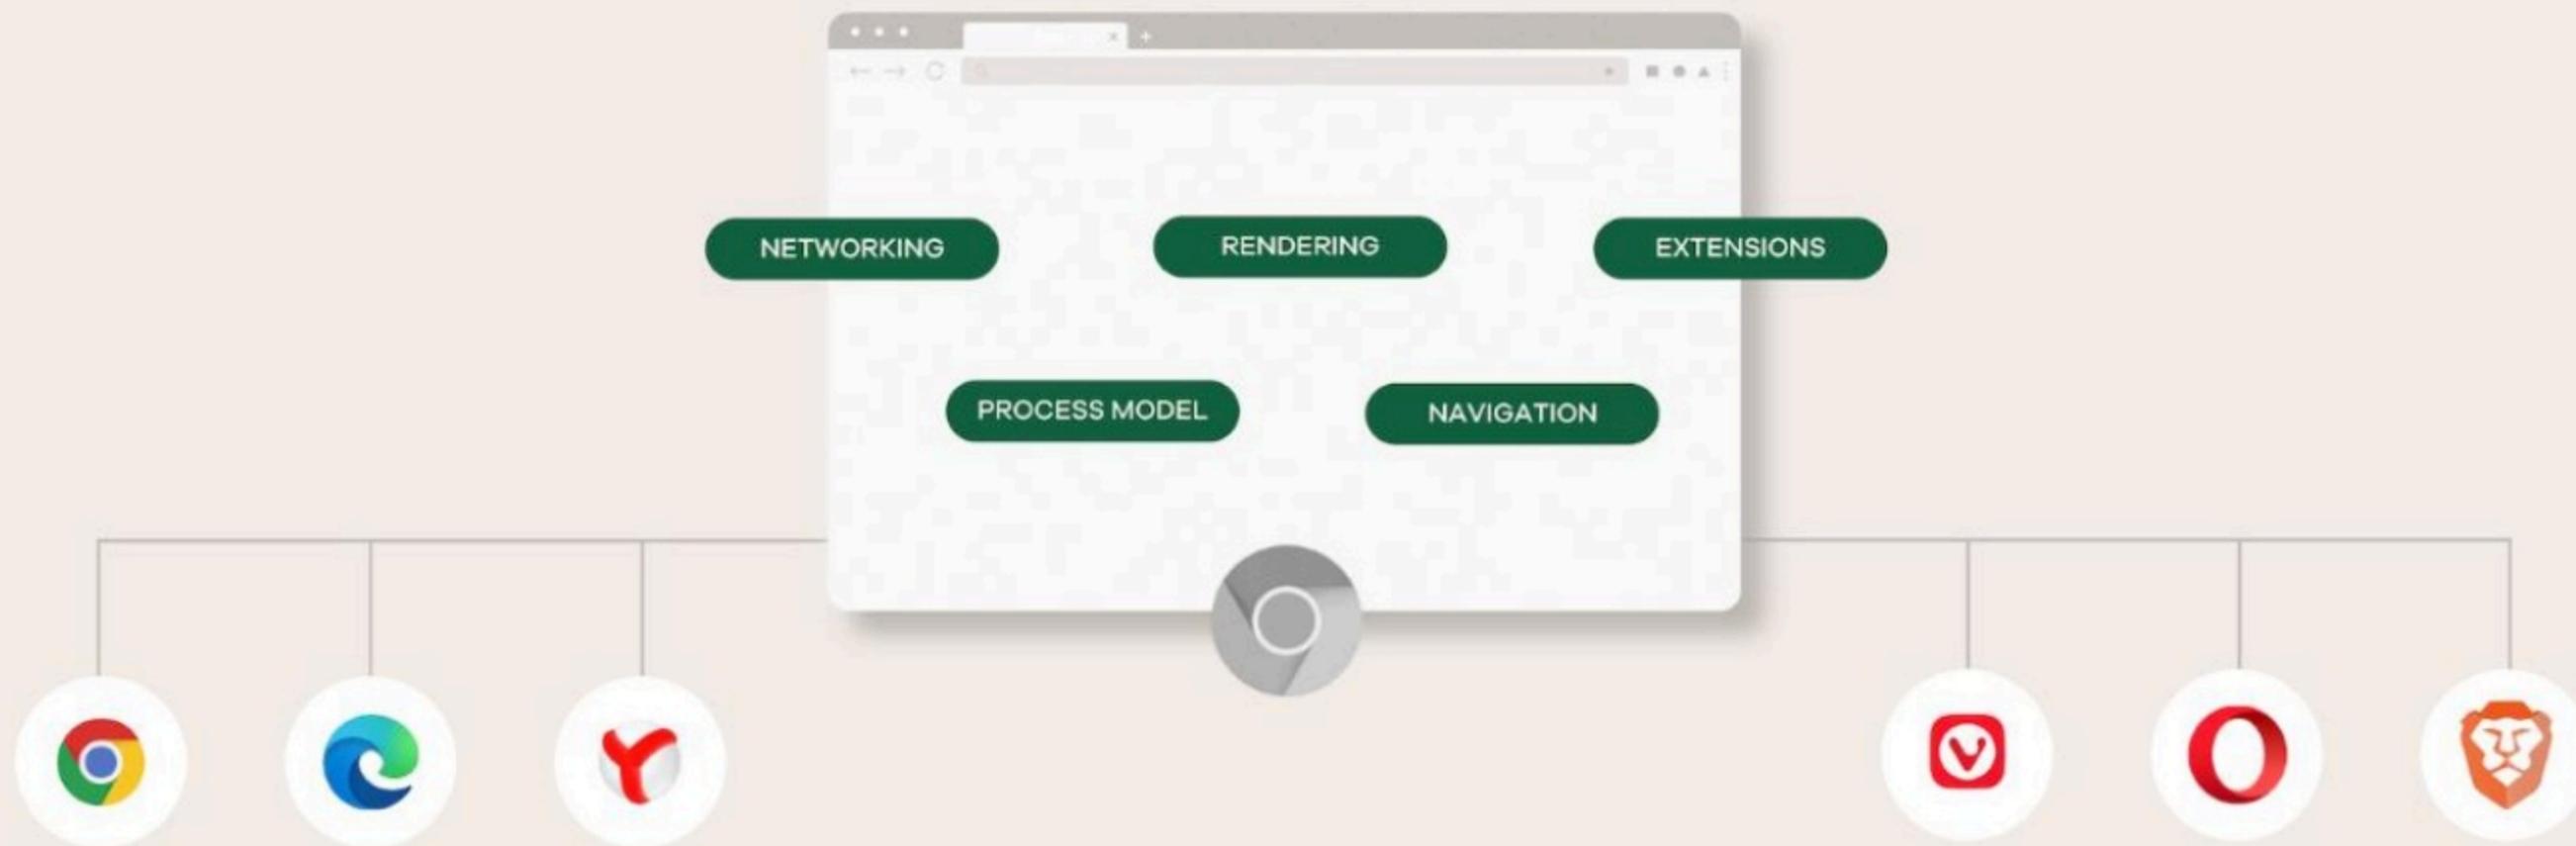

The Enterprise Browser

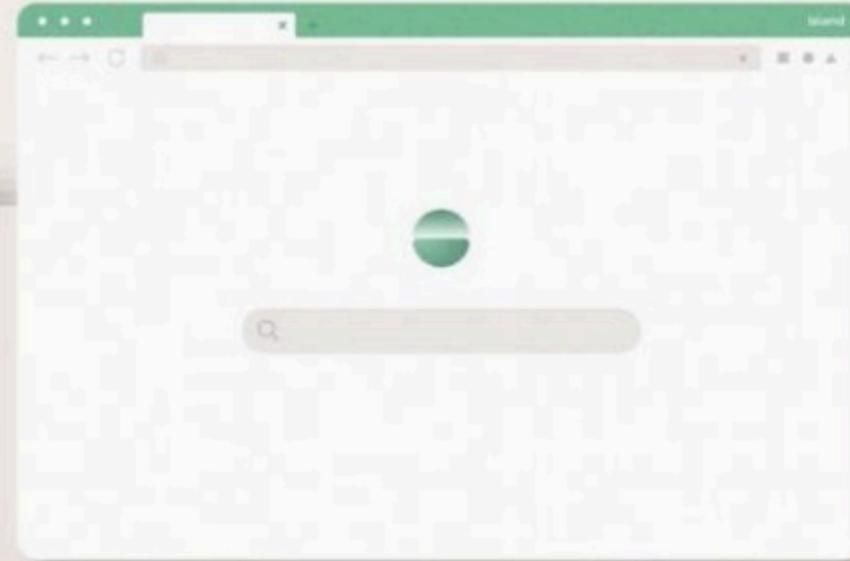

The browser that puts the enterprise in complete control.
Delivering a level of security, visibility, and productivity
that simply weren't possible before.

The Rise of the Chromium Browser

Chromium, an open-source project, has become the standard for the modern browser with core architecture

The Last-Mile Control Enterprises Need The Experience End-Users Expect

Consumer Browser Features

- Networking
- Private Browsing
- User Experience (Look & Feel)
- Process Model & isolation
- Extensions
- Device / Data Synch
- Rendering Engine & Codecs

Enterprise Capabilities

- Enterprise Trust
- Safe & Secure Browsing
- Browser-Based RPA
- Enterprise Productivity
- Forensic Audit Logging
- Configuration Management
- Last-Mile Control
- Privacy
- Security Integration
- User Experiences
- Traffic Management
- IT Supportability

Key Use-Cases

Shared Capabilities

- Last-Mile Controls
 - Cut / Copy & Paste
 - Screen Capture
 - Print / Save
 - Download & Upload
- Automation Scripts
- Auditing, Logging & Forensics
- Device Posture (Assess & Enforce)
- Integrated Authentication
- Agile Network Routing
- Secure Storage
- Security Tool Integration
- Management & Policy

Critical SaaS & Web Apps

Provide monitored & restricted access to critical applications (Salesforce, ServiceNOW, Workday, O365)

Contractor / BYOD Access

Native web access with built-in data protection, device assessment without cumbersome MDM tools.

M&A, JV Integration & Divestitures

Quickly implement access & control to sensitive and proprietary web applications without the need to re-platform or deploy countless security agents.

VDI Reduction

Reduce the need for VDI environments for web access with a native browser that provides all "last-mile" protection & visibility.

Privileged Users (Admin Access)

Enhanced logging, monitoring and protection when admins access web-based administration & configuration consoles

Say Yes

Allow secured and guarded access to applications and sites that challenge existing security policies. Often these are collaboration and social platforms.

Regulatory and Legal Demands

Controlling the last mile ensure that changing demands on data access do not require costly application redesign.

Safe Browsing / Native Browser Isolation

Allow users to freely browse the Internet with native protection to prevent unknown or malicious sites from introducing risk.

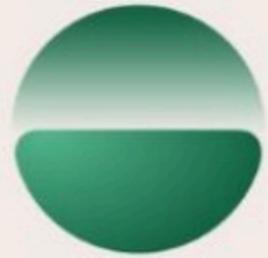

Resiliency – Path Forward

In the event of a security incident, utilize a controlled, secured browser for all web access to keep the business functioning.

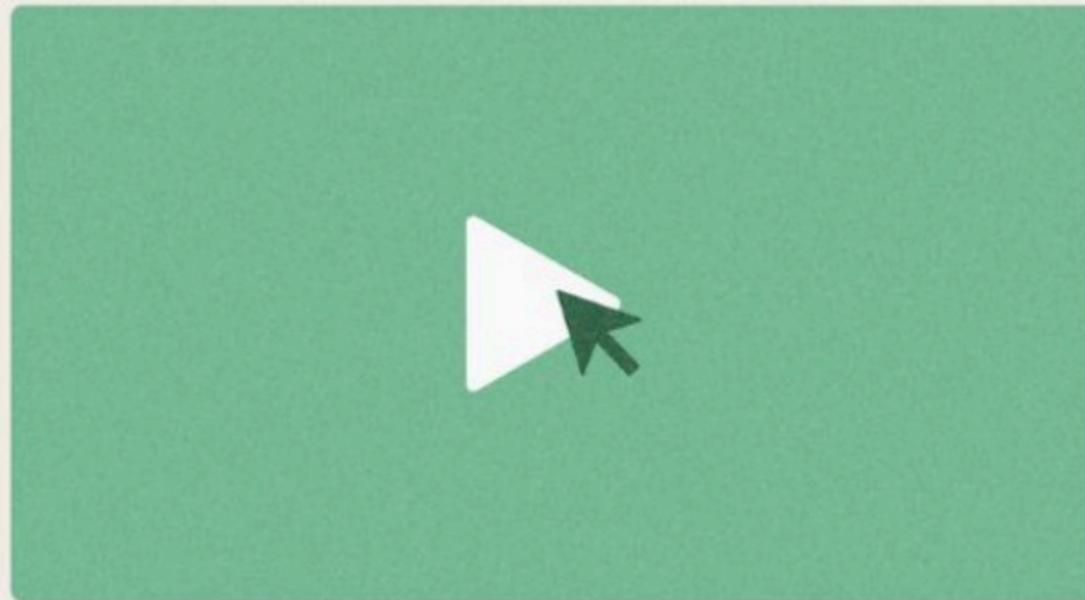

Zero-Trust Access

Complete your Zero Trust program with a trusted and managed browser that provides strong authentication & monitoring.
