

Mysten Labs

We create foundational infrastructure to accelerate web3 adoption

Who are we?

- We are senior leaders from Facebook's advanced blockchain R&D org.
- We have experience from Apple, Microsoft, VMWare, Corda / R3, crypto startups including Chainspace, Vega, Nym.
- We are team leaders, product builders, experts in systems, cryptography, programming languages, and verification.
- We are bringing top level talent to realize our imagination with world leading research and best engineering practices.

Evan Cheng - CEO

Senior Director of R&D - Novi Research (Facebook)

- Recipient of 2012 ACM Software System Award
- Previously Apple
- Advisor to Chainlink, Quantstamp, Zilliqa

Sam Blackshear - CTO

Principal Engineer - Novi Research (Facebook)

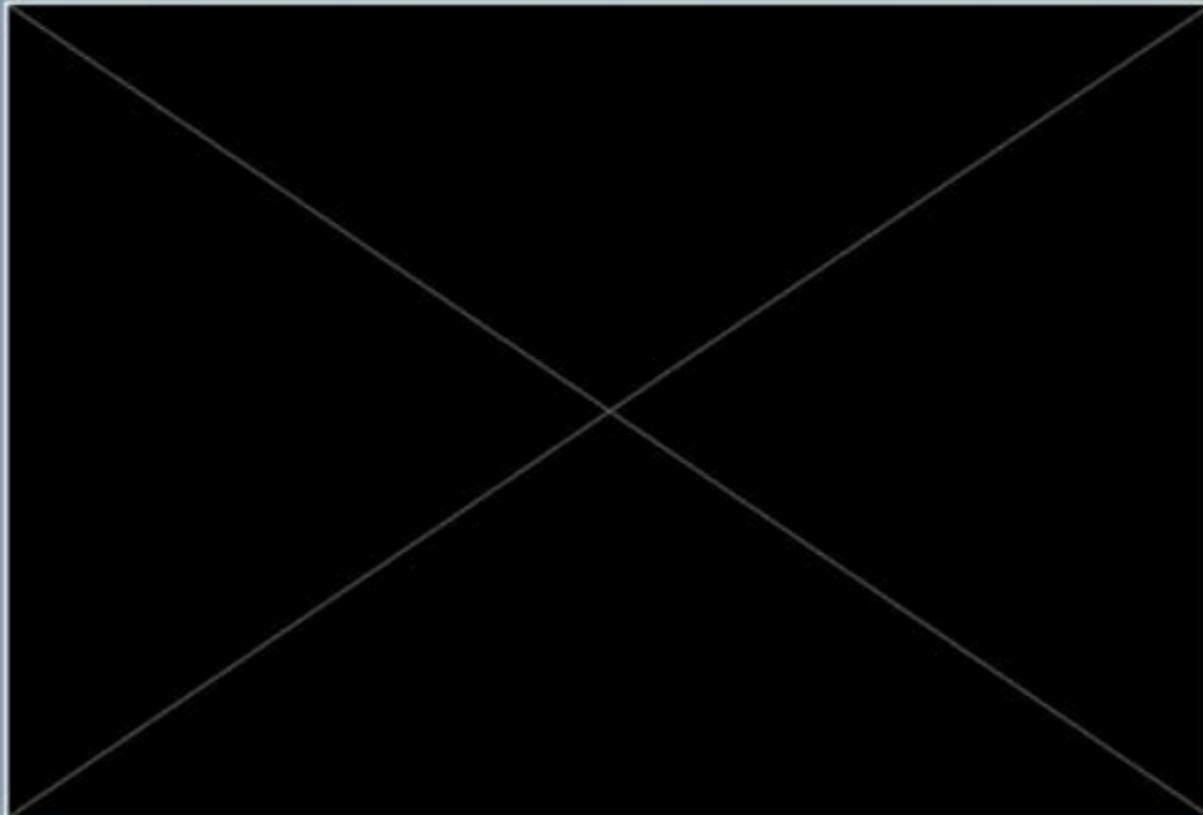

- Tech lead of Move platform - a modern and safe smart contract language for Diem
- One of the youngest principal engineers at Facebook
- Recipient of 2014 Facebook Fellowship

Adeniyi Abiodun - COO

Senior Staff Product Manager - Novi Research (Facebook)

- Product lead of Novi Research, leading cutting edge web3 / crypto R&D initiatives at Facebook
- Head of Product Management of Oracle and VMWare blockchain platforms
- Founded and launched a cloud based bitcoin mining company in 2012

George Danezis - Chief Scientist

Professor of Security and Privacy Engineering at University College London

- Previously Principal Research Scientist at Novi Research (Facebook) where he led all systems and security R&D
- Co-founder of layer 1 startup Chainspace.io, which was acquired by Facebook in early 2019
- Adviser of Vega, Nym, and Celestia
- Published over 100 papers since 2000 on security, privacy and applied cryptography,

Problem

Web3 infrastructure complexity adds unacceptable friction

Platform design mistakes

Dev outgrowing Solidity/EVM
Slow, high-cost audits increase
time to market

Fragmentation

Contracts and assets are hard
to reuse / move across L1's
and L2's

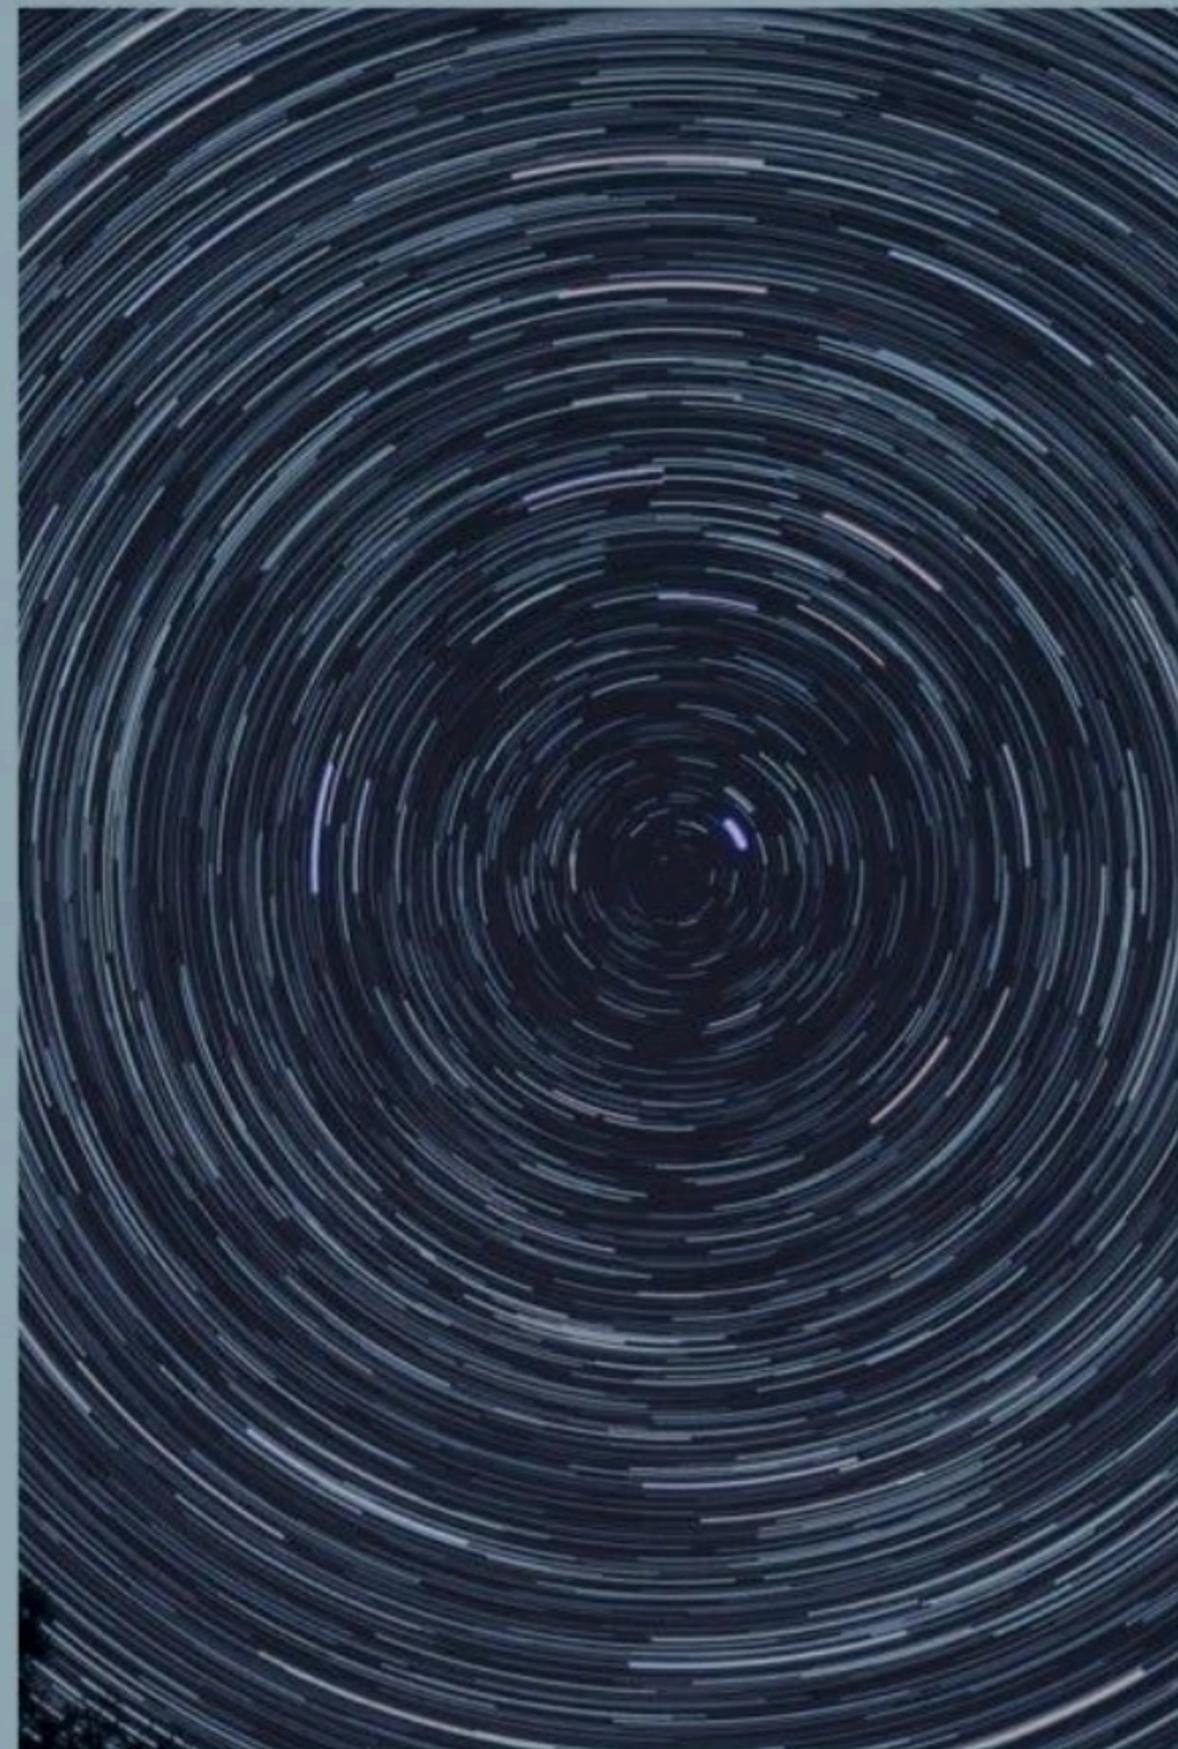

User unfriendliness

Mobile integration is clunky.
Self custody is scary for
non-experts.

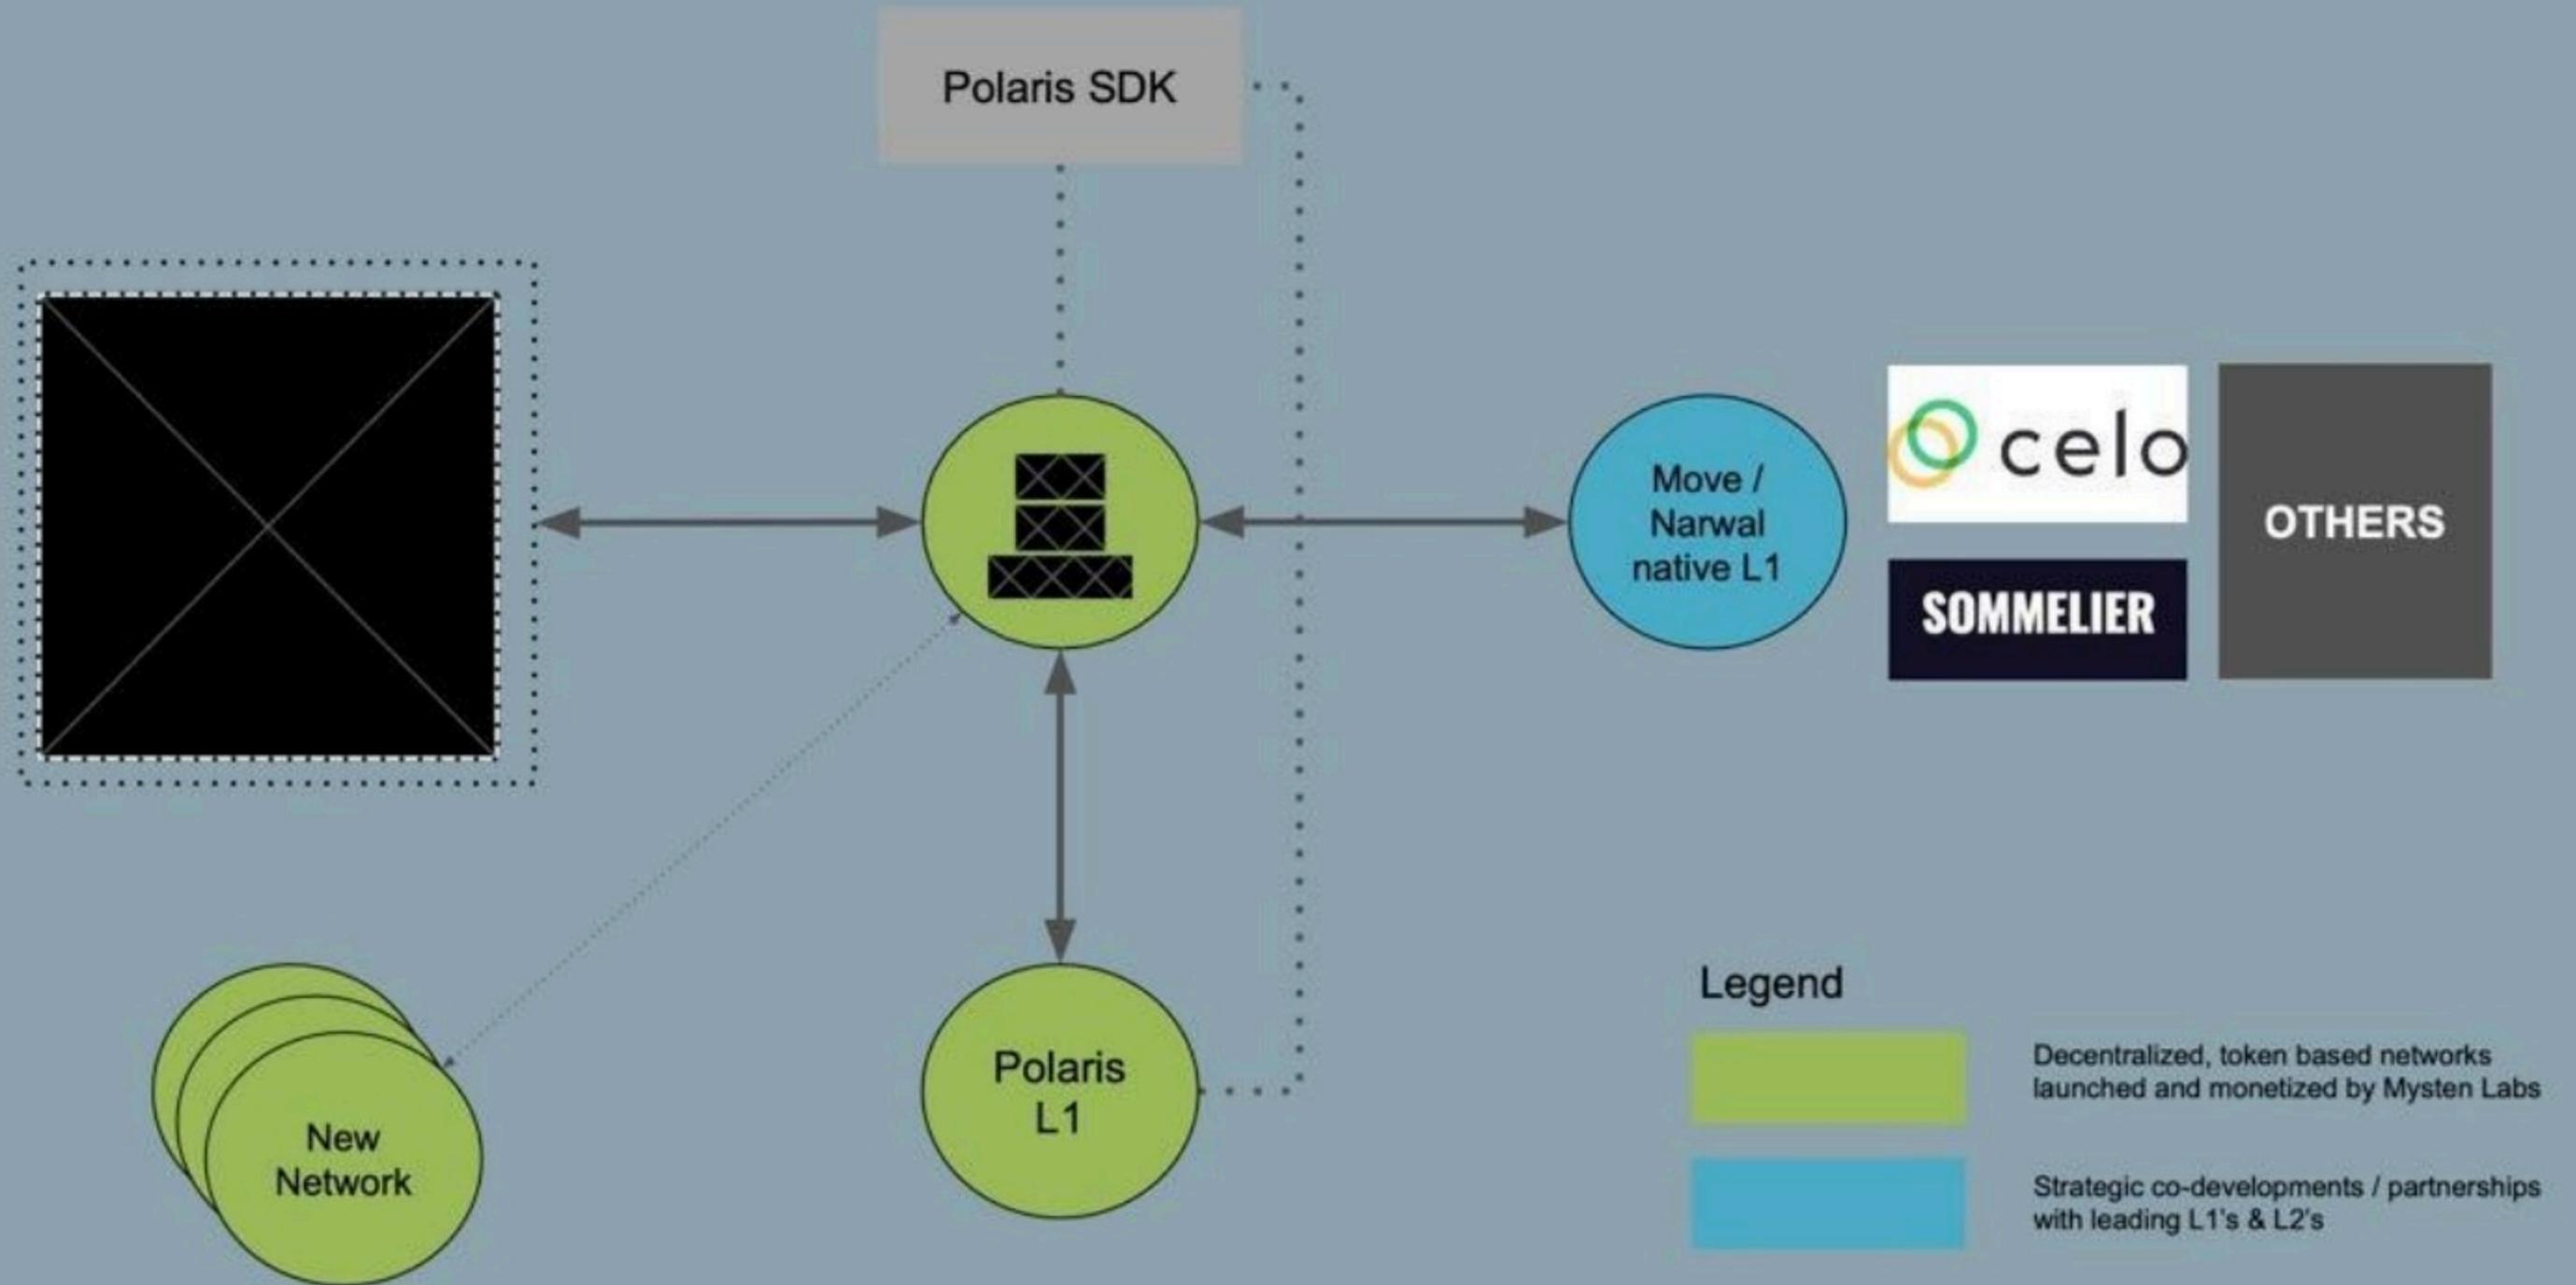

Our solution

Polaris web3 platform

- Rather than taking a bottom up approach (e.g. a new L1), we are **launching and monetizing one interconnecting building block at a time**.
- The Polaris web3 platform **abstracts away all L1 & L2 complexities**, enabling developers to build, deploy, manage their web3 products.
- We will **launch the Polaris web3 platform on top of the “best stacks”**. It consists of all the layers of plumbing delivered by us and our partners.

The Polaris Stack

Road to Polaris

● 2021/22

- **Network Launch**
 - Launch ██████████ network & token ██████████
- **Ecosystem**
 - Deploy Move, KERP, Narwal & Tusk into L1 networks, [CELO](#) and [Sommelier](#)
 - In return for ████████ Million stake in partner networks

● 2023

- **Ecosystem**
 - Continue to deploy Move, KERP, Narwal & Tusk into 3 networks (L1 & L2)
 - In return for significant stake in partner networks
 - R&D ground breaking protocols (hyper scale bft, advanced cryptography etc)

● 2024

- **Network Launch**
 - Release full Polaris SDK (rich frameworks for Move smart contract developers)
 - **Launch Polaris 1.0 network and token** on top of ecosystem of Mysten partner networks.
- **Ecosystem**
 - Continue to deploy Move, KERP, Narwal & Tusk into 4 networks (L1 & L2)
 - In return for significant stake in partner networks

● 2025

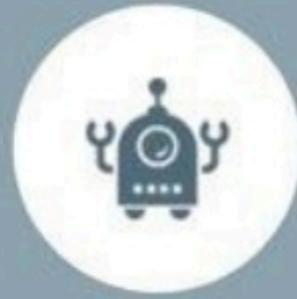

- **Network Launch**
 - Launch Polaris 2.0 with hyper scalable BFT
- **Ecosystem**
 - Deploy hyper scalable BFT to partner networks (support thousands of nodes at millisecond latency and high throughput)

Progress in the last two months

Ecosystem & Partnerships

- Celo (co-dev signed)
- Sommelier.finance (co-dev signed)

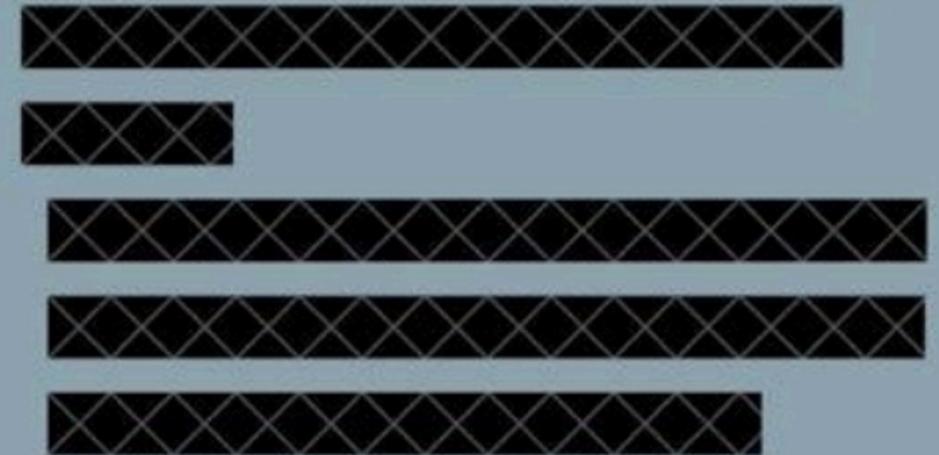

Projects

- [redacted] core protocol R&D complete, testnet within 6 months. Reached agreements for [redacted] token stakes in two partner networks for co-developments.

Recruiting
