# Developers currently spend years weaving together partial solutions.

Productivity is the outcome of **structured data** and **efficient process**.

Connecting and collecting data is easy.  
Putting data to work is hard.

Others are **limited** because they only solved the easiest technical problems.

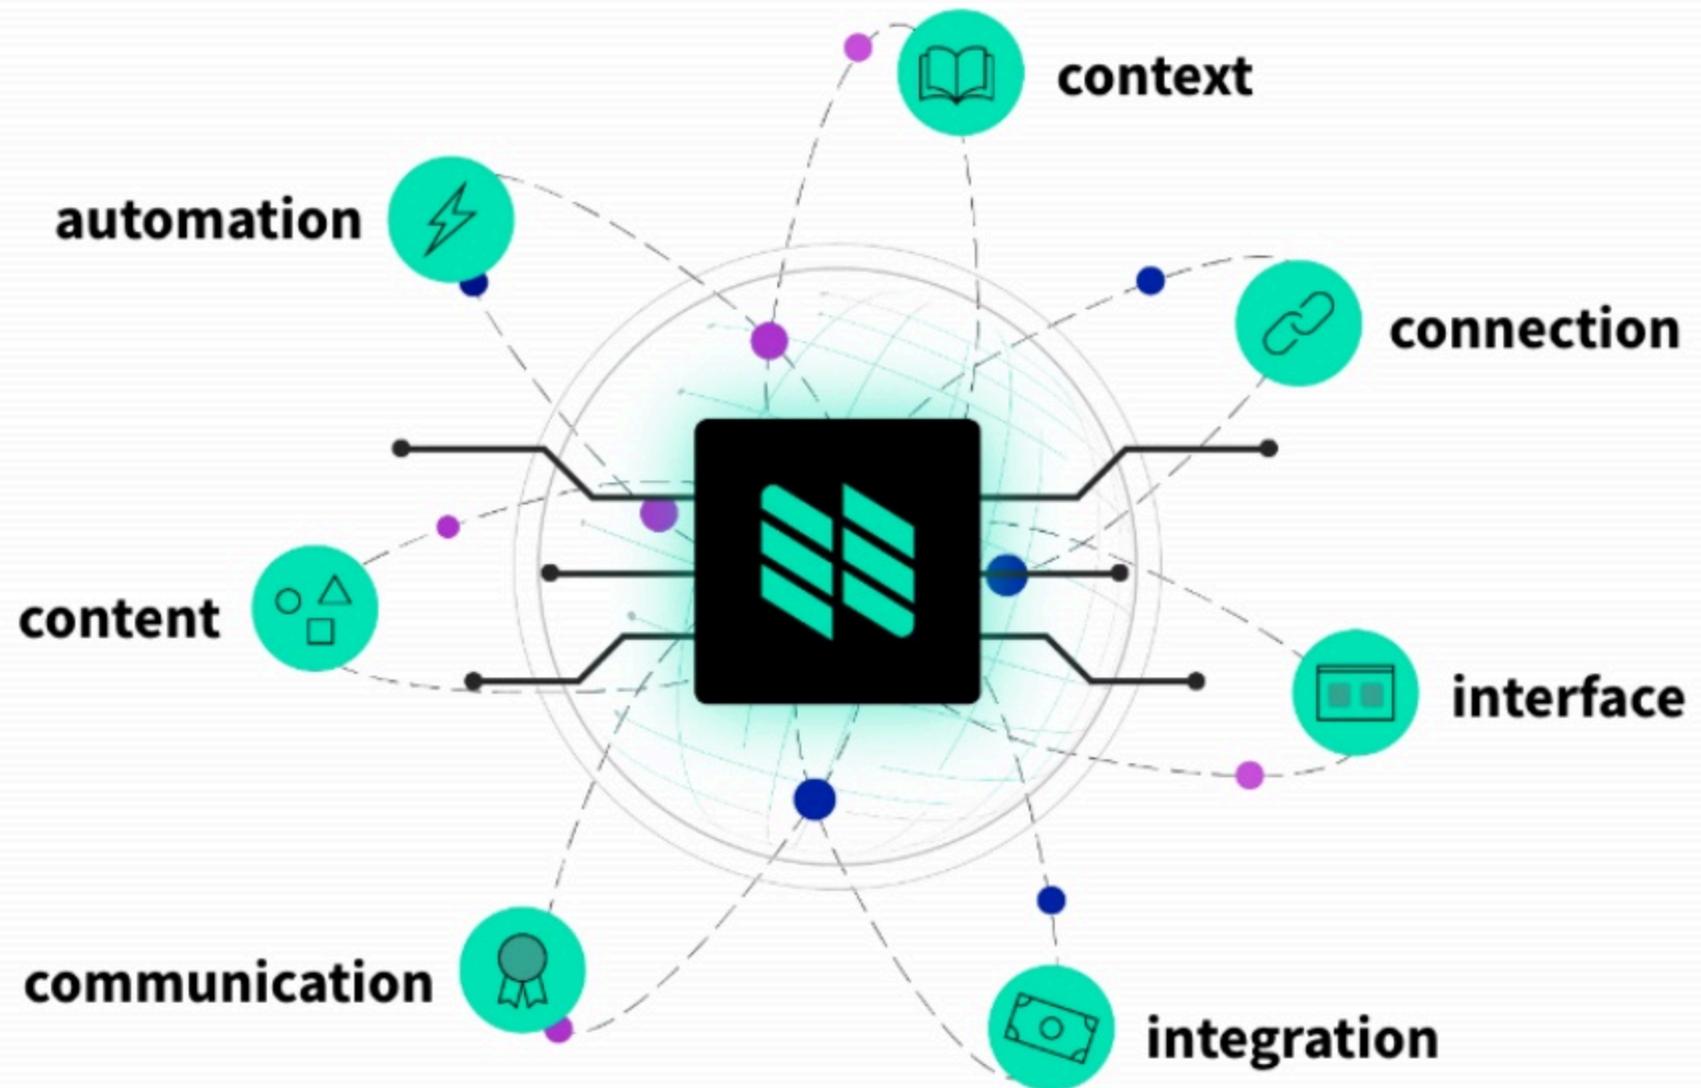

# We give developers the useful data and the tools to put it to work.

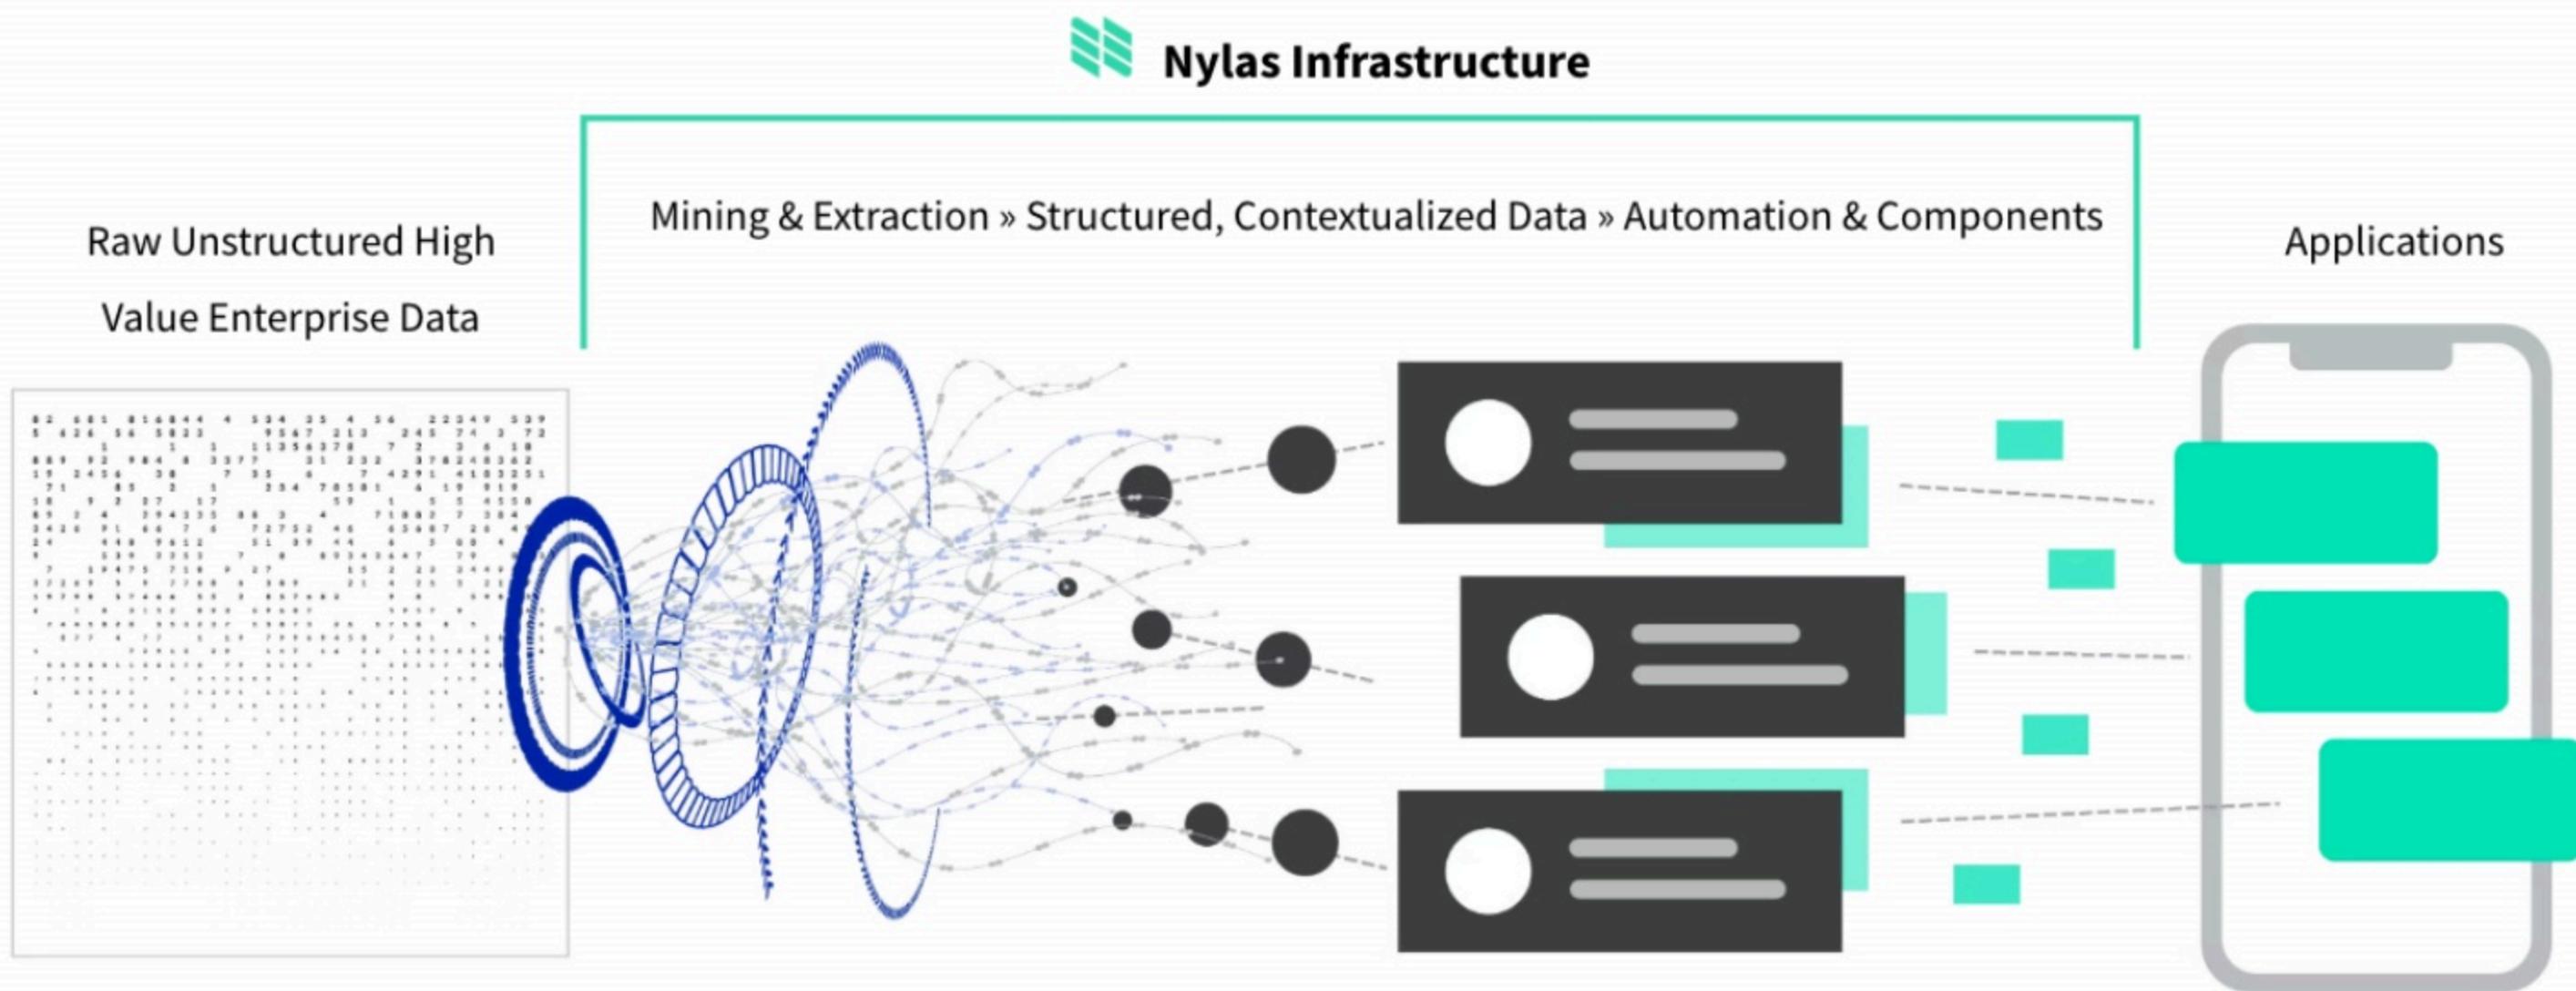

We built the hard thing first:  
**A Universal Data Engine.**

We give developers the **extensible** data  
and process focused on the outcome of  
business **interactions.**

This allows us to power the  
**Future of Productivity.**

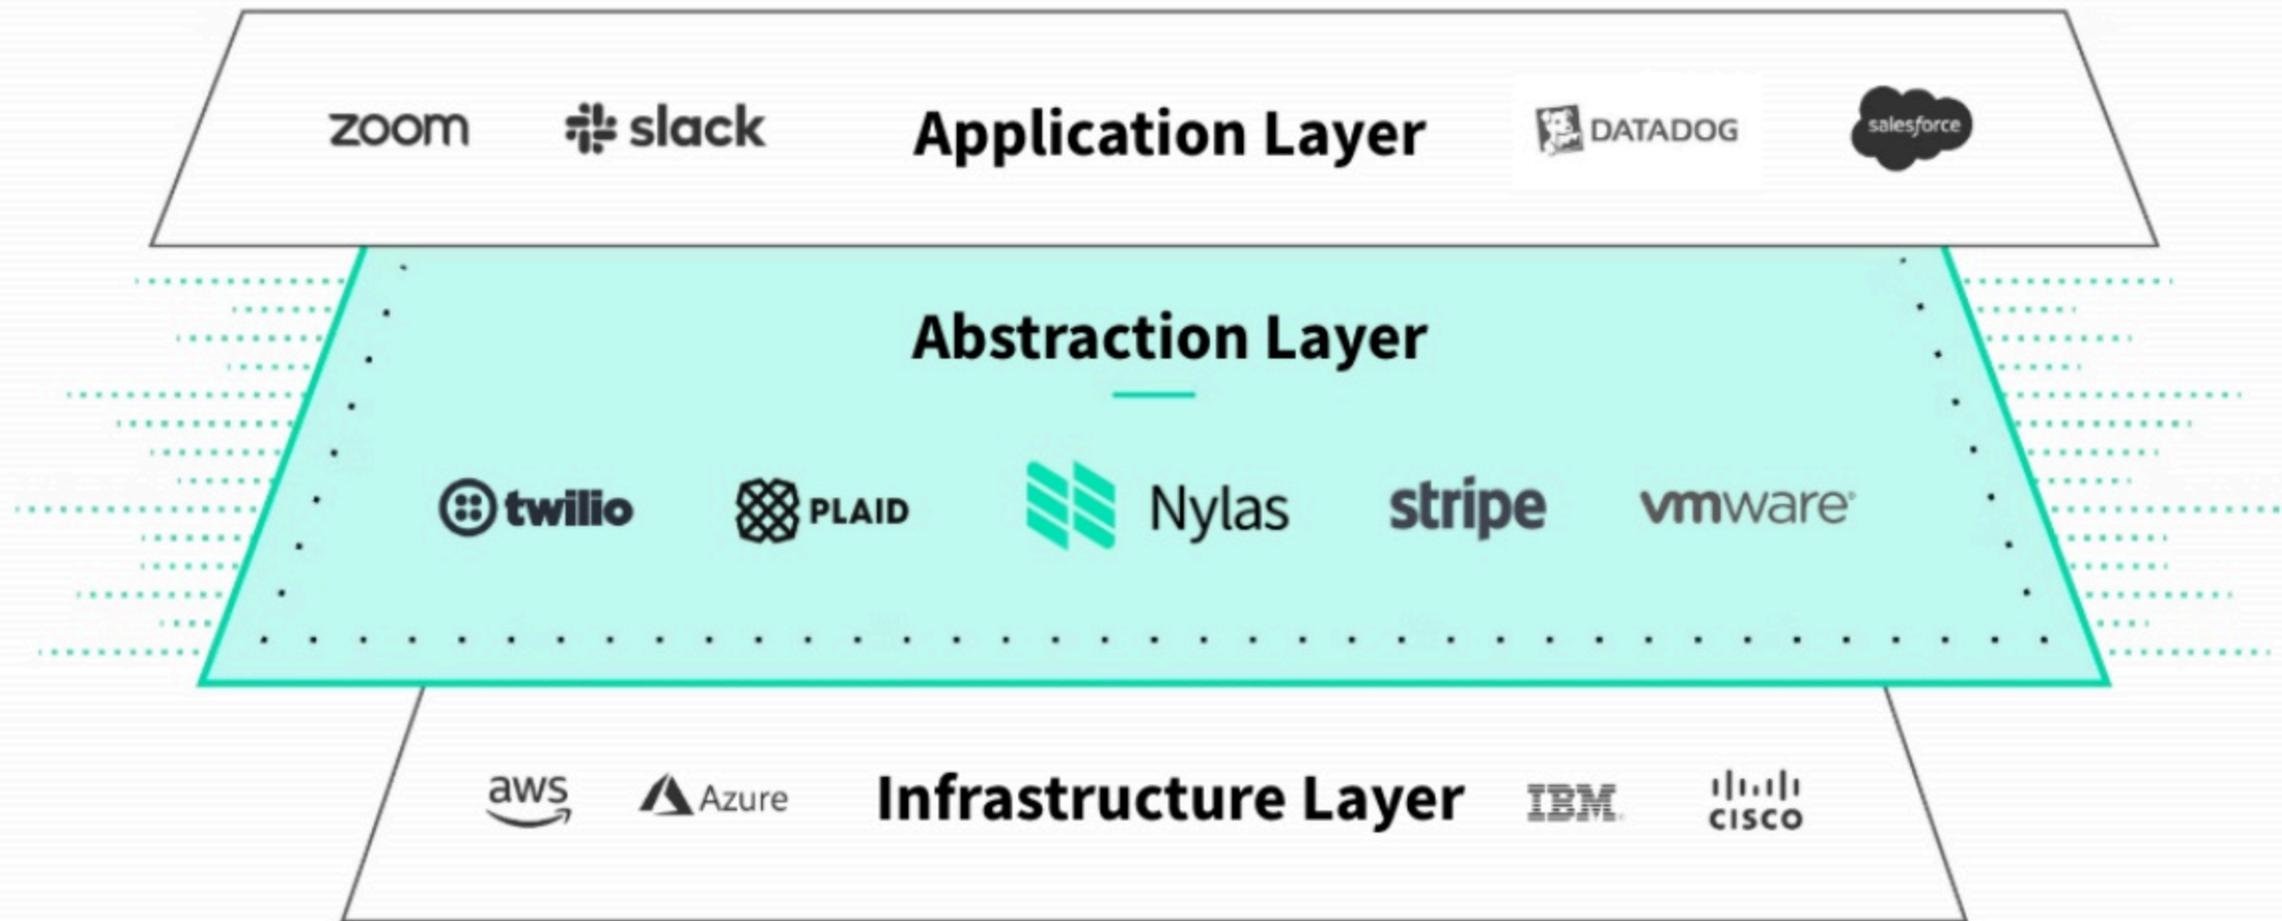

# We've revolutionized the way business apps are built.

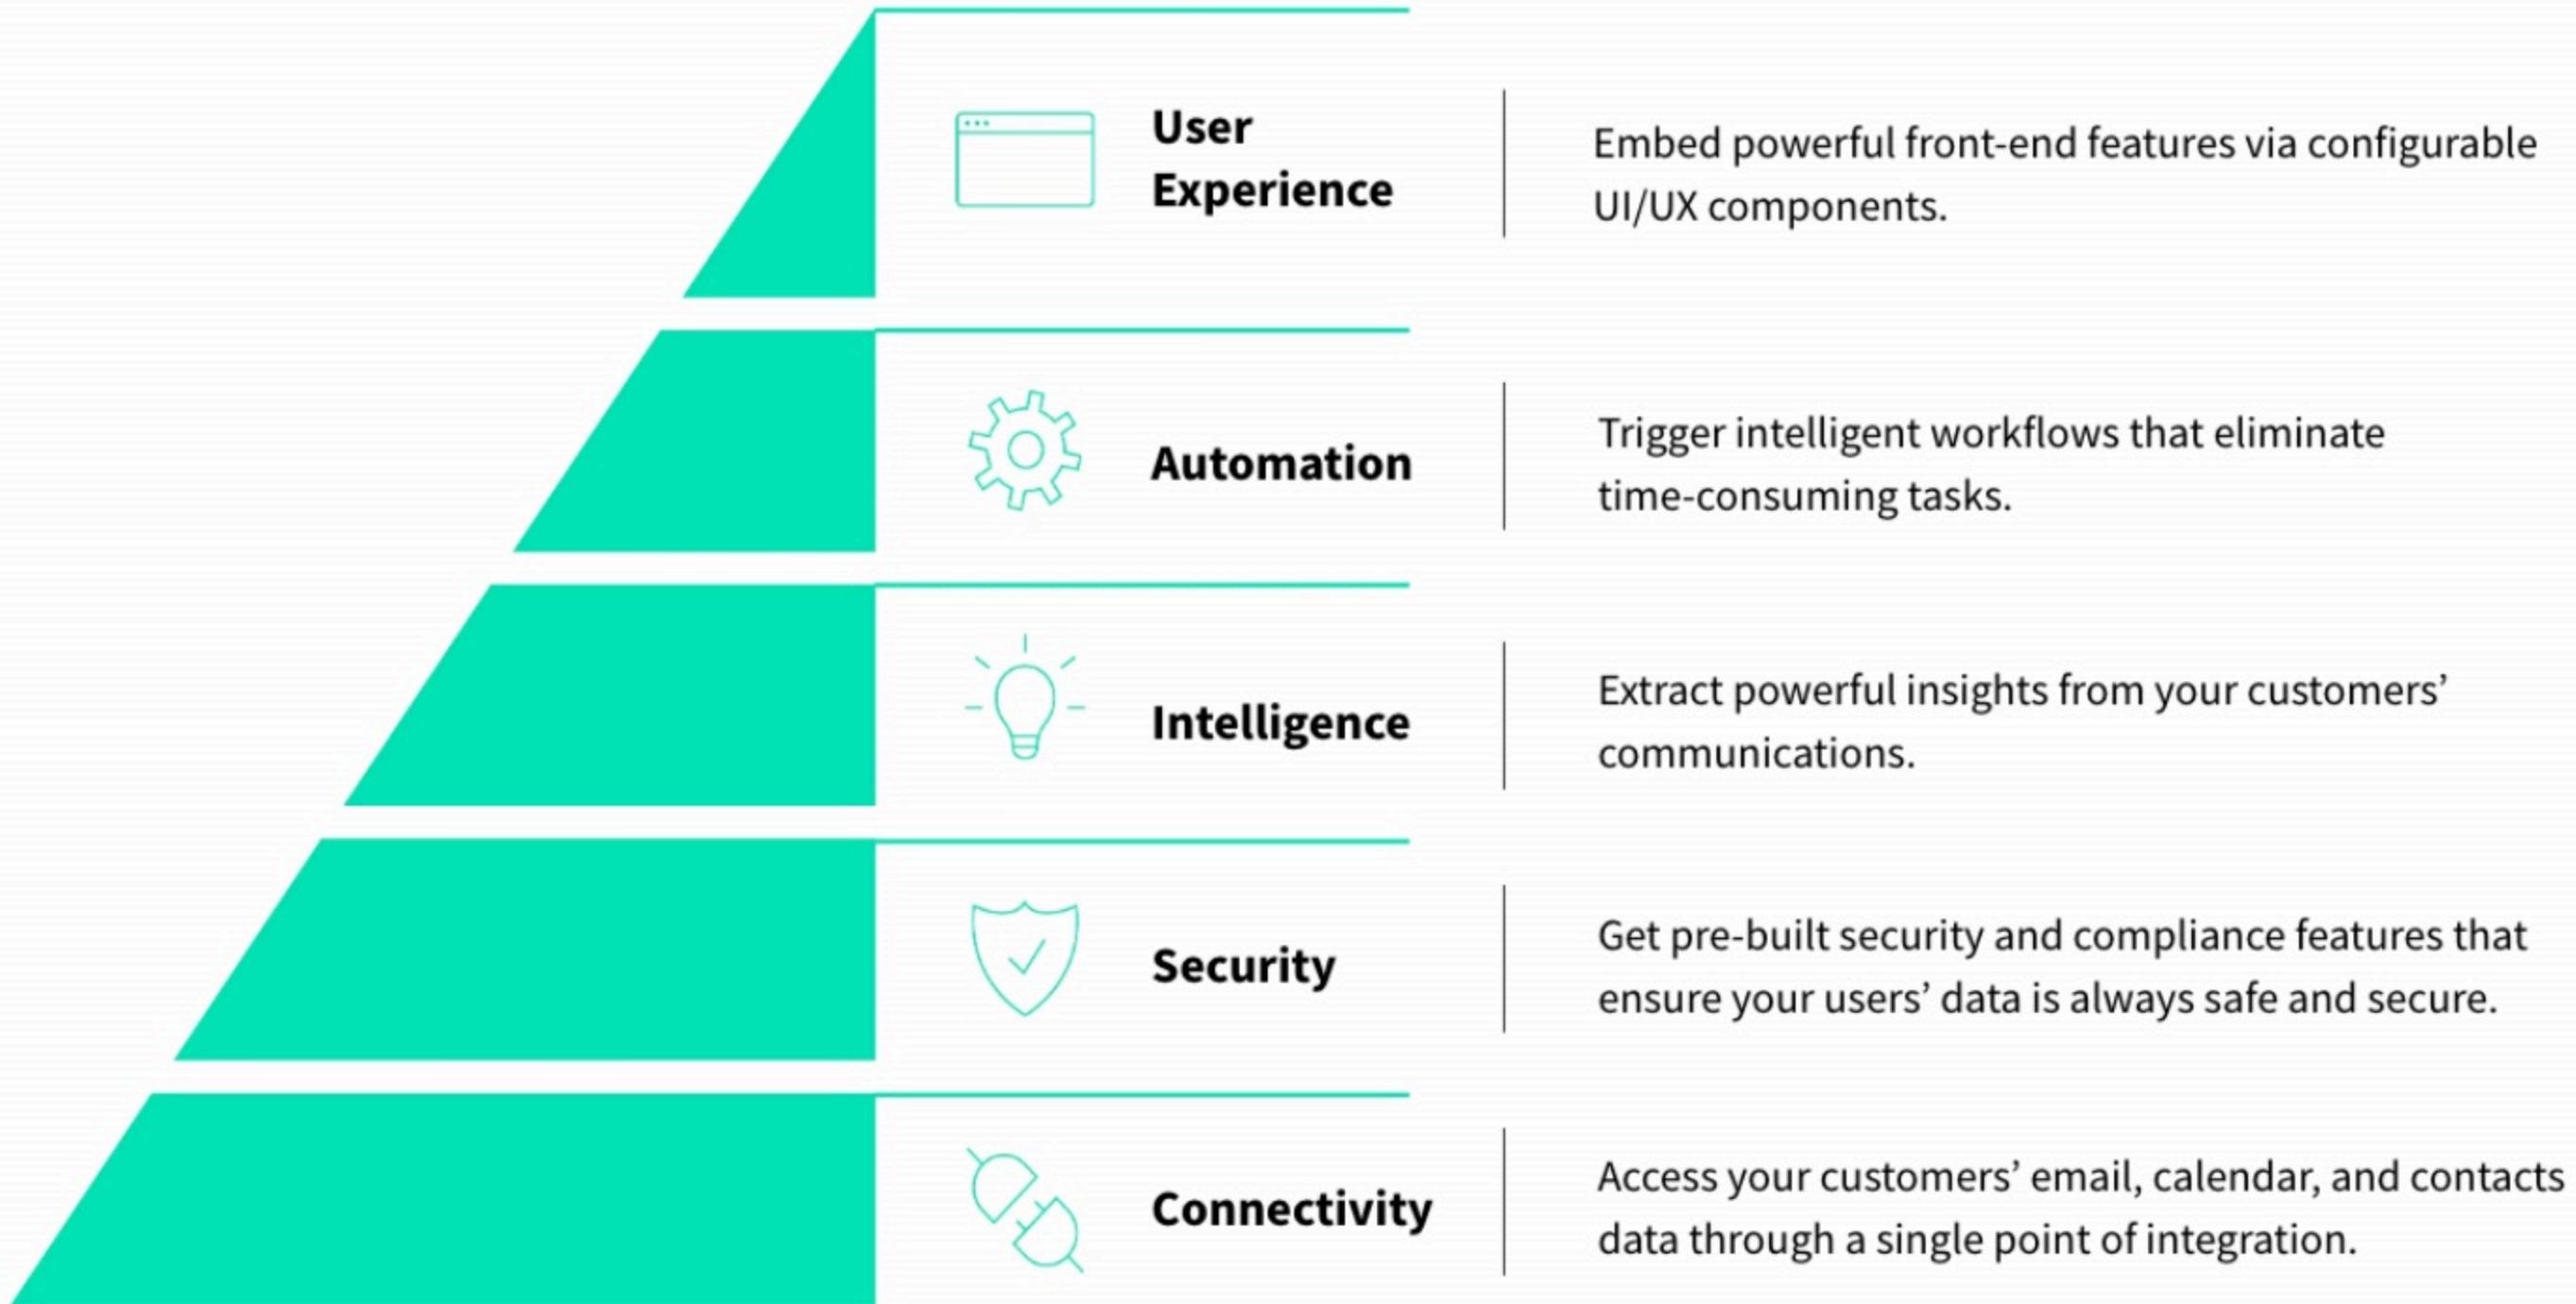

**Nylas is democratizing productivity.**

# We want to own the means of software production

The last 10 years have been all about building the right application.  
The next 10 years will be all about **owning the building blocks of software.**

# The Nylas Platform

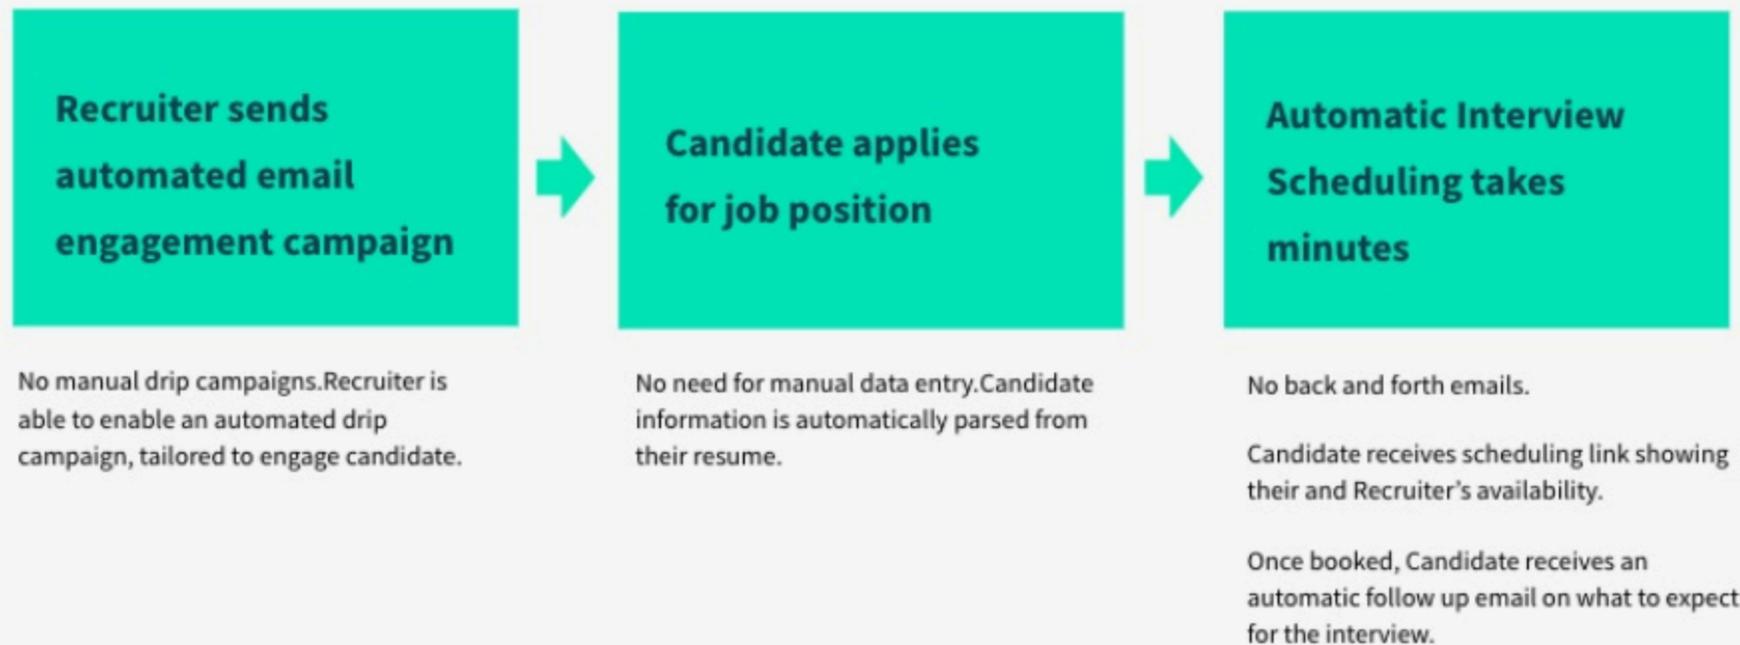

# Example Recruiting Use Case

## Before Nylas

## After Nylas

## Use Cases Today (cross industry examples)

## Use Cases Tomorrow (new industries)

### Email Connectivity

**Sales**  
Power 1:1 customer engagement flows at scale

**Productivity**  
Centralized mailbox for all of your email accounts

**Healthcare**  
Prioritized inbox for Doctor's, cut down reply times

**eCommerce**  
Extract purchase from customers' emails to improve marketing

### Calendar Connectivity & Scheduling

**Recruiting**  
Schedule candidate interviews across any calendar provider

**Real Estate**  
Easily see property tour availability

**Healthcare**  
Automated scheduling of policy renewal meetings

**Productivity**  
Send Slack message to team when project status updated

**Sales**  
Send SMS reminder to prospect about upcoming meeting

**Healthcare**  
Push important notifications by Email/SMS/Chat, improve response time

**Insurance**  
Improve agent response time via SMS/Chat features

### Entity Detection & Content Categorization

**Productivity**  
Create chat-like experience for emails and extract sentiment.

**CS**  
Prioritize human-to-human emails, cut down reply times

**eCommerce**  
Use order confirmation data for addtl. upsell services

**Logistics**  
Digitize invoices, better purchase/pricing data integrity

### Sentiment Analysis

**Recruiting**  
Predict a candidate's offer acceptance based on sentiment from email

**CS**  
Automatically sort tickets based on how angry customer is

**FinTech**  
Optimize delivery for important messages based on reply sentiment

**Insurance**  
Predict likelihood of customer policy renewal based on customer communications

# We sell to the builders — here's why they buy

## VP of Engineering

**Buys to guarantee delivery and scalability**

**Promoted for** -Delivering new features to market ahead of schedule and below budget

**Fired for** -Unreliable products, not driving velocity, lack of innovation, security/compliance

## Developer

**Buys to solve problems and ship code**

**Promoted for** -Finding and delivering reliable solutions to complex product goals

**Fired for** -Adding unnecessary complexity, Wasting money on tools that don't work

## CEO / Business Exec

**Buys to improve business results and defend market opportunity**

**Promoted for** -Increasing revenue and market share; Finding new strategic opportunities

**Fired for** -Creating legal/other liability for the company; falling behind competition.

## Head of Product

**Buys to quickly build better products**

**Promoted for** -Delighting users; increasing product adoption and usage

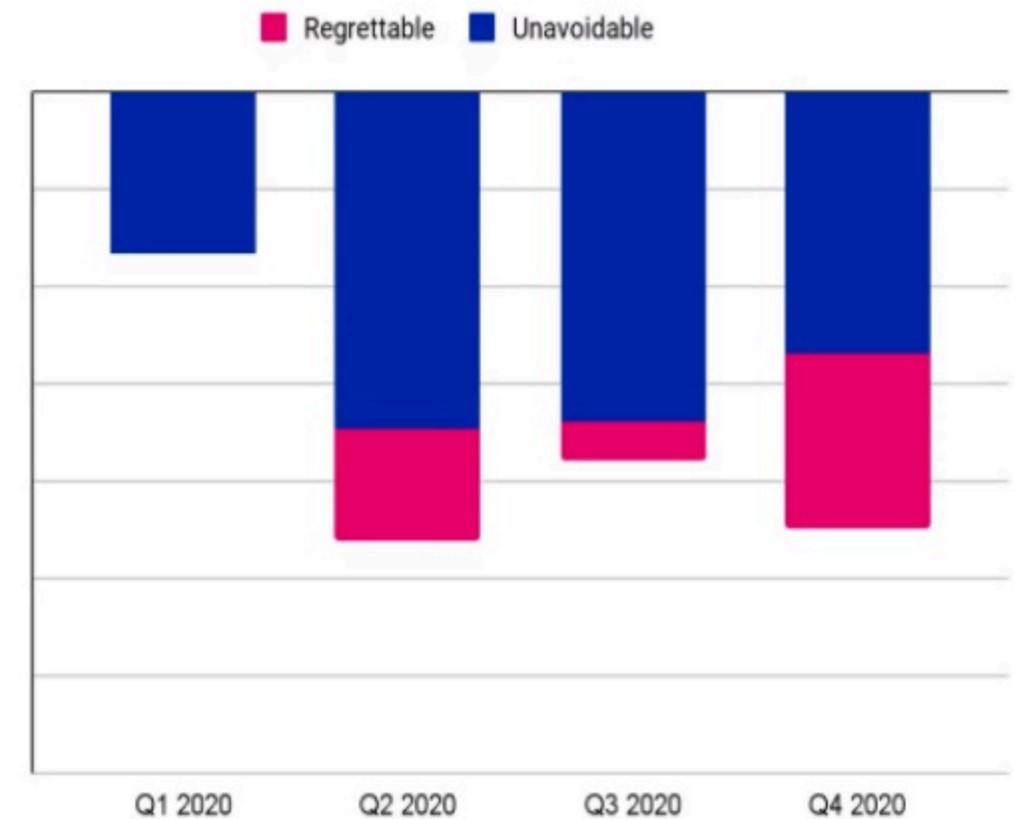

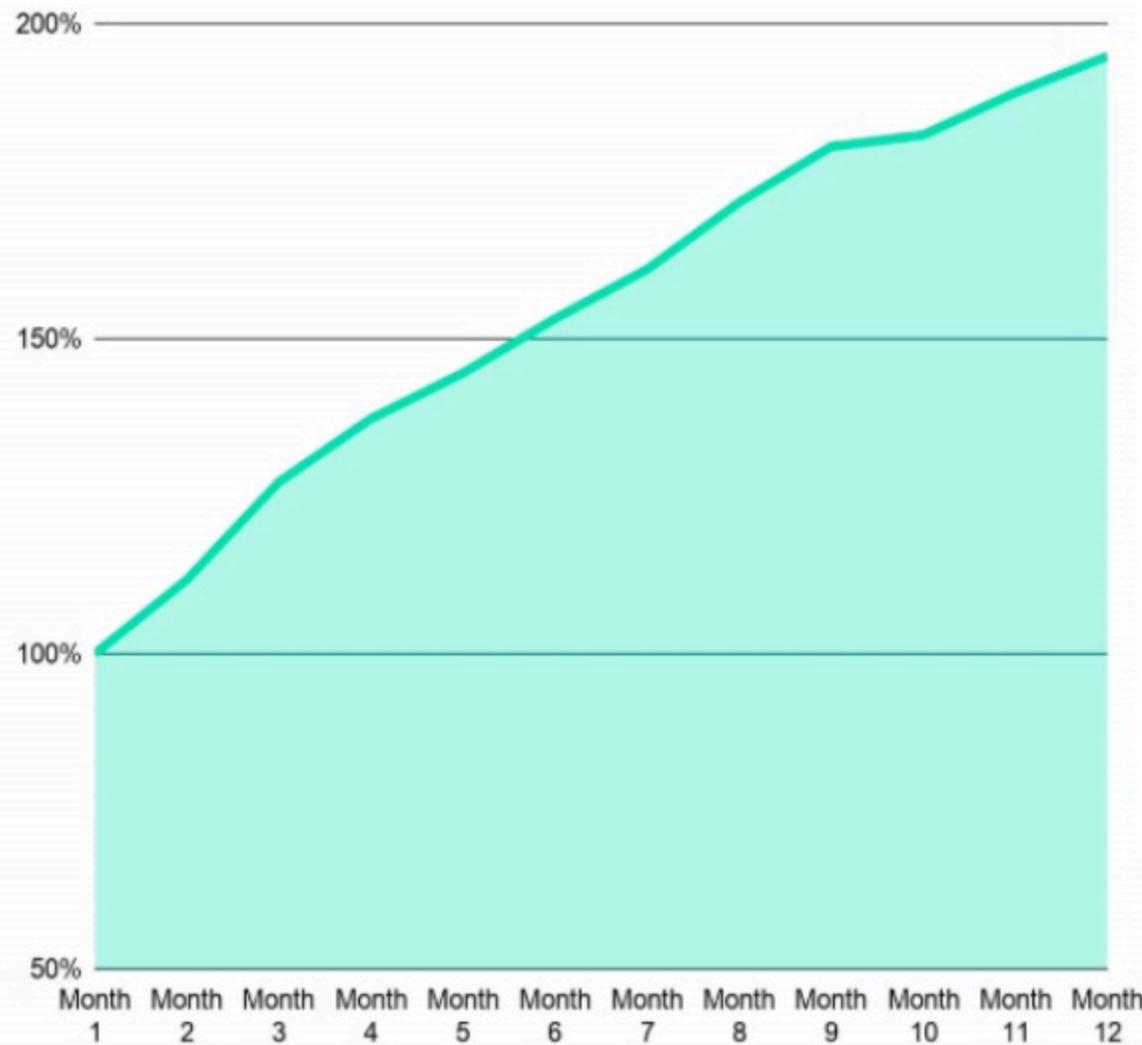

**Fired for** -Building products that customers don't want, lack of innovation

# Retention + Expansion = Hypergrowth

## Top Reasons Why

1. Adding additional Nylas products or data types to their applications
2. Rolling out new features built with Nylas to their broader user base
3. Organic expansion as customer grows
4. Cross-selling to other customer BUs
