

Modernizing Physical Identity for the Future of Work

Series A Deck

Business led by a 2x-SaaS founder

MOHIT GARG
Co-founder & CEO

- 2X Founder, Previously Co-founder & CRO, Mindtickle (SaaS tech valued at \$1.2B)
- Mindtickle raised \$280M the SaaS GTM from scratch and grew ARR by 1000+% in 3 years
- Early member of world-leading product teams at Aruba Networks and Iospan Wireless

EDUCATION

EXPERIENCE

Product led by an identity-tech expert

MADHU MADHUSUDHANAN
Co-founder & CTO

- Built identity management solutions at IBM, voice-AI authentication at IBM Watson
- Creator of Patented BLE based identification protocols. Designed BLE SDK with 4M Downloads
- Winner of **several innovation awards** - HTNEXT, Phocuswright and Next Big Thing

EDUCATION

LEAVEY SCHOOL
OF BUSINESS

EXPERIENCE

Physical access and authentication systems are antiquated

- ! Clunky Hardware
- ! Poor User Experience
- ! Poor Identity Assurance
- ! Limited or No Data Intelligence

The pandemic has accelerated the trend towards the modernization of physical identity at the workplace

Touchless, Connected & Intelligent

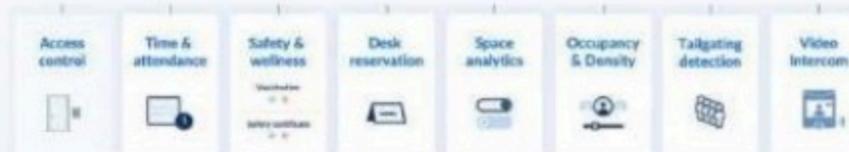

COVID-19 to Cause Global Fingerprint Revenues to Fall 22% in 2020

That's the latest projection from ABI Research, which says governmental budgetary restrictions, a shift in commercial investments and hygiene are to blame.

© October 16, 2020 | SSI Staff | Jump to Comments

NEW YORK — Global fingerprint biometric device revenues are expected to fall 22%, or \$1.8 billion, to \$6.6 billion in 2020 due to the ongoing coronavirus pandemic, according to a recent report from global tech market advisory, ABI Research.

The entire biometrics market, however, is forecast to regain momentum in 2021 and is expected to reach approximately \$40 billion in total revenues by 2025.

Integrated & Converged

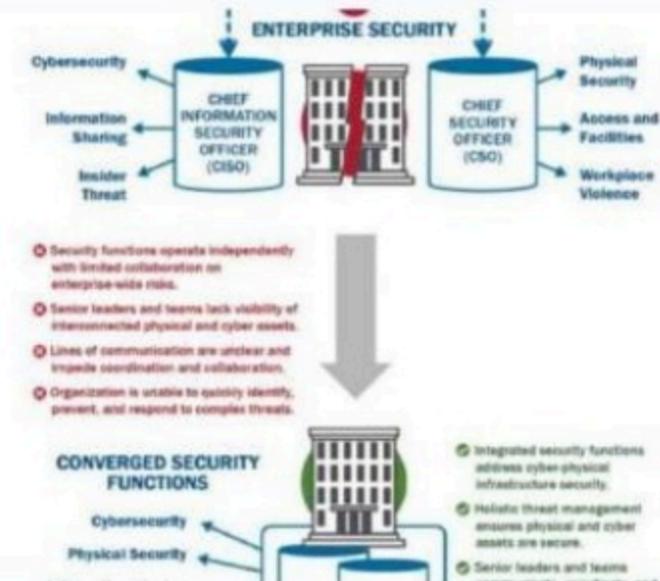

A CONNECTED OPERATING ENVIRONMENT

Today's threats are a result of hybrid attacks targeting both physical and cy integration of Internet of Things (IoT) and Industrial Internet of Things (IIoT) increasingly interconnected mesh of cyber-physical systems (CPS), which ex blurs the once clear functions of cybersecurity and physical security. Means resilience and accelerate the adoption of advanced technologies can also ir risks in this evolving threat landscape.

Data & AI Driven Security

Okta, Active Directory and other SSO systems are designed for cyber identity and not physical identity

SSO for the desk worker

6,500+ cloud, on-prem, and mobile applications

Identity and Access For Physical Applications??

Oloid Vision: Single-sign-on for physical identity

Starting with physical access control (PACS) as the anchor use case of physical identity management

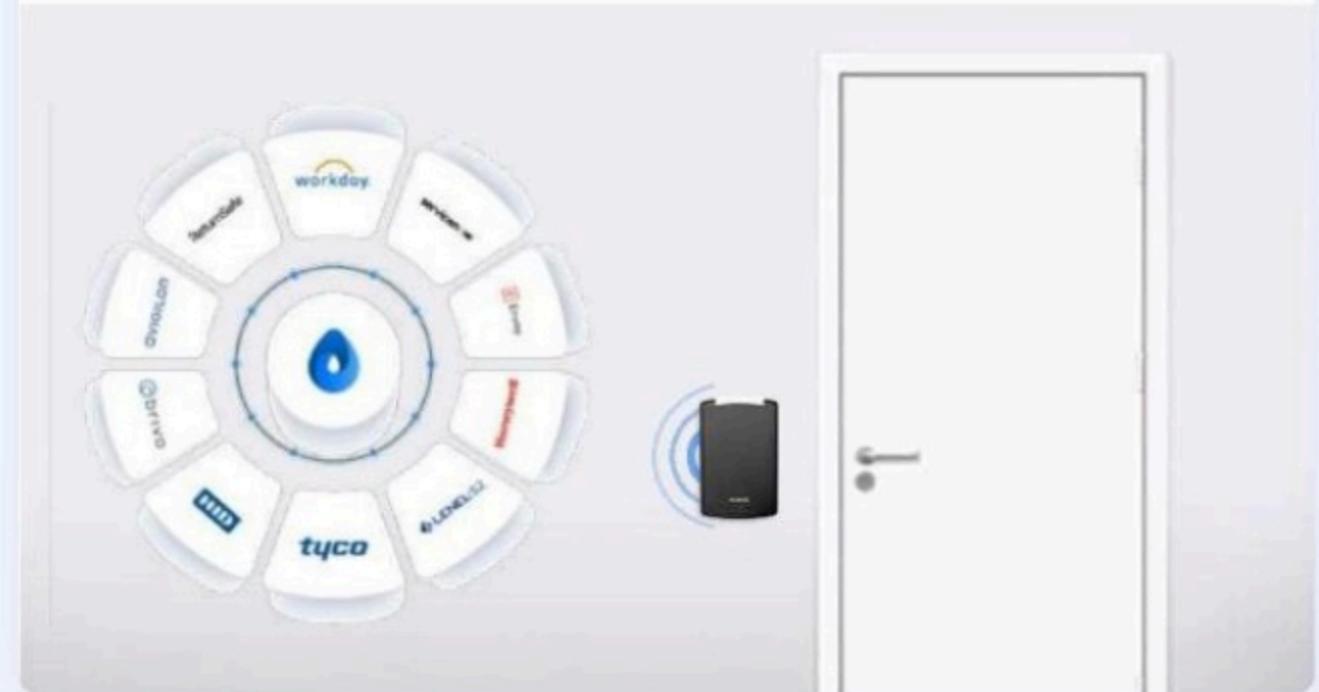

1 Frictionless end-user experience

Modern | Touch-less | Card-less | Smartphone-enabled

2 Integration with Existing Systems

SSO integrations | Desk Reservation | Vaccine Management

3 Smarter administration

Centralized with Remote access

Low code rules for conditional access

Real-time alerts

Analytics & reporting

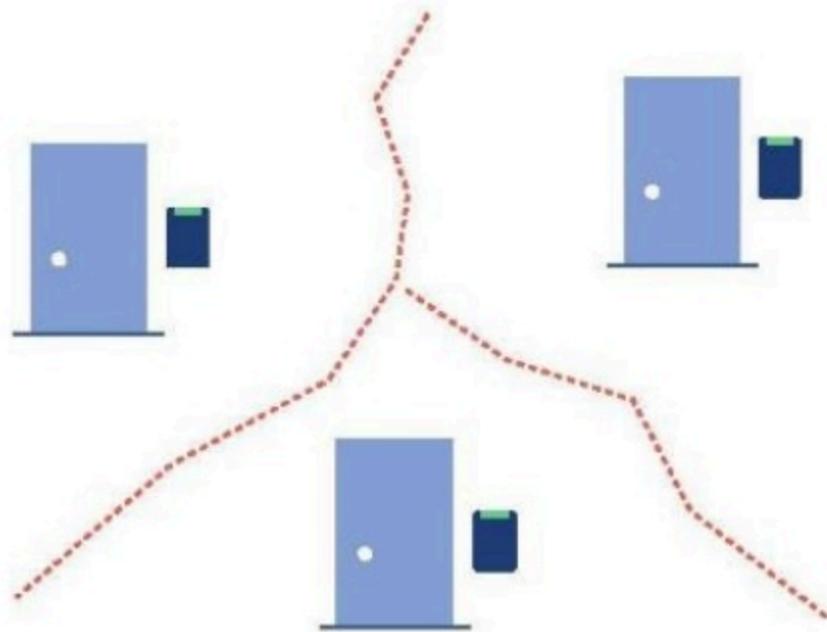

PACS* is undergoing a generational upgrade. Businesses are shifting to modern systems

Legacy

Replacing old custom hardware with new does not provide future proofing

Problem with existing BLE solutions: Customers may need to replace the readers again when they want to support NFC on Apple Wallet

The Oloid Product

Oloid moves the intelligence into the cloud and edge application and integrates with the existing hardware

Oloid Saas Cloud

Existing PACS

Traditional PACS/Activation

Oloid App on Smartphones

End-user Transactions/Authentication
Using Mobile app (Bluetooth/BLE, QR) or Facial Auth

Similar Approach as Nest has taken in the home automation market

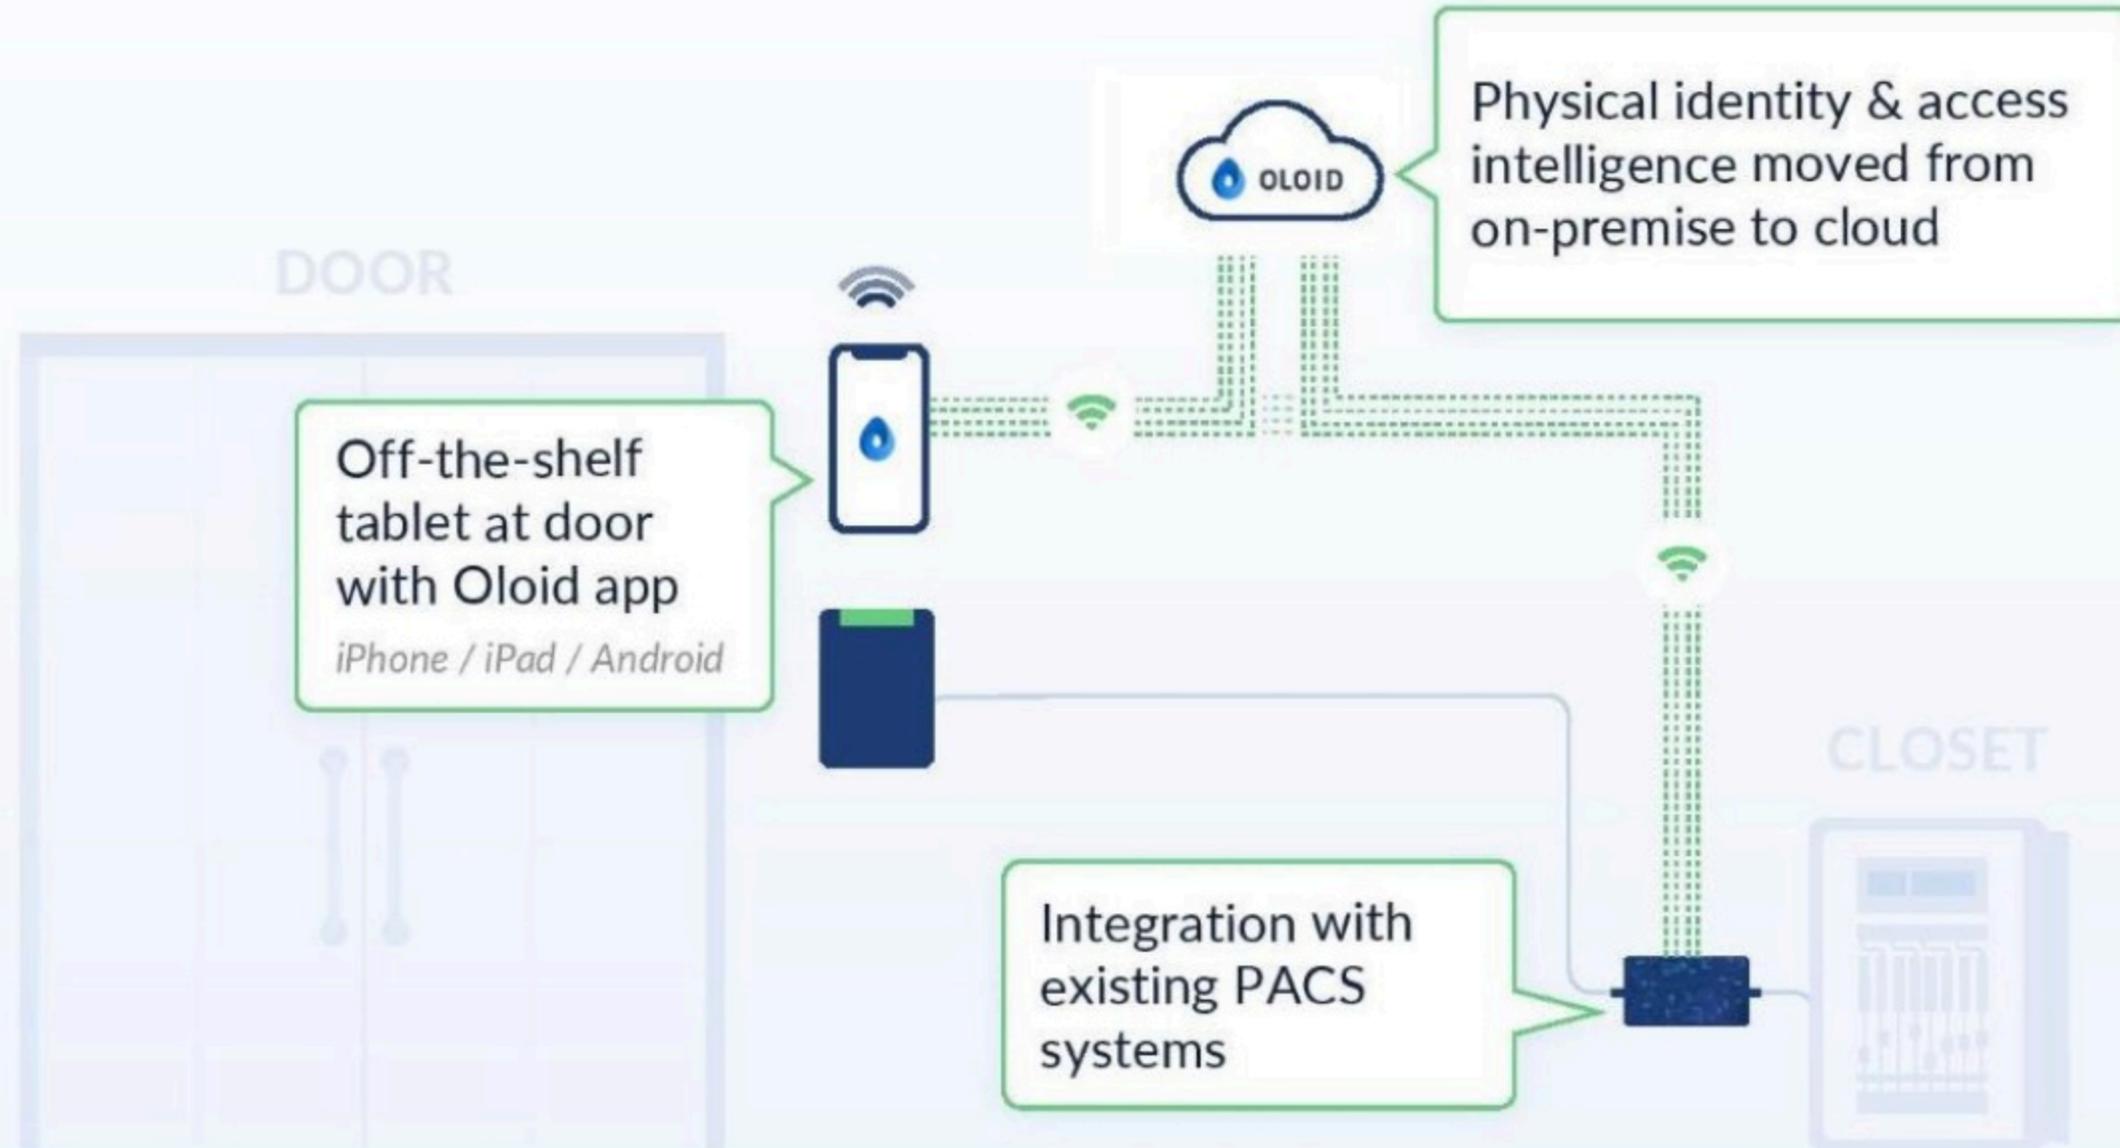

Intelligence in Cloud & Mobile

Integrates with existing HVAC & Security Systems

Modernizing physical access control as a software overlay

Existing h/w made smarter with Oloid s/w overlay

Multimodal
(BLE, FR, QR, NFC)

Cloud-based

API accessible

Creating the foundation for integrated cyber-physical identity
