

INTRODUCTION

2021 NOVEMBER

Kaycee Lai
CEO and Founder

Today: Business rely on getting insights from multiple sources.

But: Finding & moving data with complex ETL prevents fast decision making.

Promethium is the

ONLY

solution built for fast decision making
in today's hybrid & distributed world

Problem:

The current state of decision making isn't sustainable

"85% say data fact based decision making is a top priority"

2020 Gartner's The Future of Data and Analytics: Reengineering the Decisions, 2025

But:

Getting data to analysts takes too long, too many tools and too many people

"Two-thirds say decision making is only somewhat or rarely data-driven"

PwC's Global Data and Analytics Survey, July 2016

"58% of companies base 50% of their decisions on gut feel"

["How Many Business Decisions Are Based On Gut Feel Rather Than Data?"](#) Business Application Resource Center

"53% cherry-pick a certain data point that would help them make the case."

Gartner 2018 Synthesis Insights Survey

Problem:

Before ANY analytics can be done, there's complex discovery, ETL & prep.

You **don't know** if the data is correct until you get to the **end!**

Our Unique Approach

Fast, Integrated, Automated

Takes
No
Waiting

Insights
\$\$\$
Up to 100x

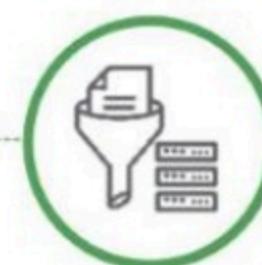

Doesn't
Require
ETL / Complex SQL

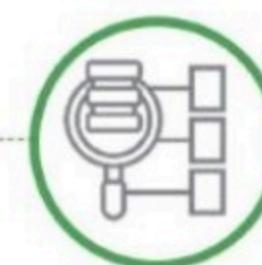

5. Return Answer

1. Ask Question

2. Generate
Datasets without ETL

3. Query Data

4. Visualize Data

(57) **ABSTRACT**
An analysis system connects to a set of data sources and perform natural language questions based on the data sources. The analysis system connects with the data sources and retrieves metadata describing data assets stored in each data source. The analysis system generates an execution plan for the natural language question. The analysis system finds data assets that match the received question based on the metadata. The analysis system ranks the data assets and presents the ranked data assets to users for allowing users to modify the execution plan. The analysis system may use execution plans of previously stored questions for executing new questions. The analysis system supports selective pre-processing of data to increase the data quality.

Customer Case Study

Before

Not enough data engineers

Takes months to complete

On Prem

Cloud

Requires complex ETL + multiple products

Business Driver

Discover **new** product offerings

- Lack of analytics prevented releasing new products.
- The data required exists in multiple silos and getting insights took months.
- New CDO tasked with enabling faster time to insights.

VS

VS

VS

With Promethium

Each Data Engineer does 1000X more

Business users gets answers in near real-time

No ETL. No Code. (Less total budget)

Governance

Help business users know what data should vs should not be used

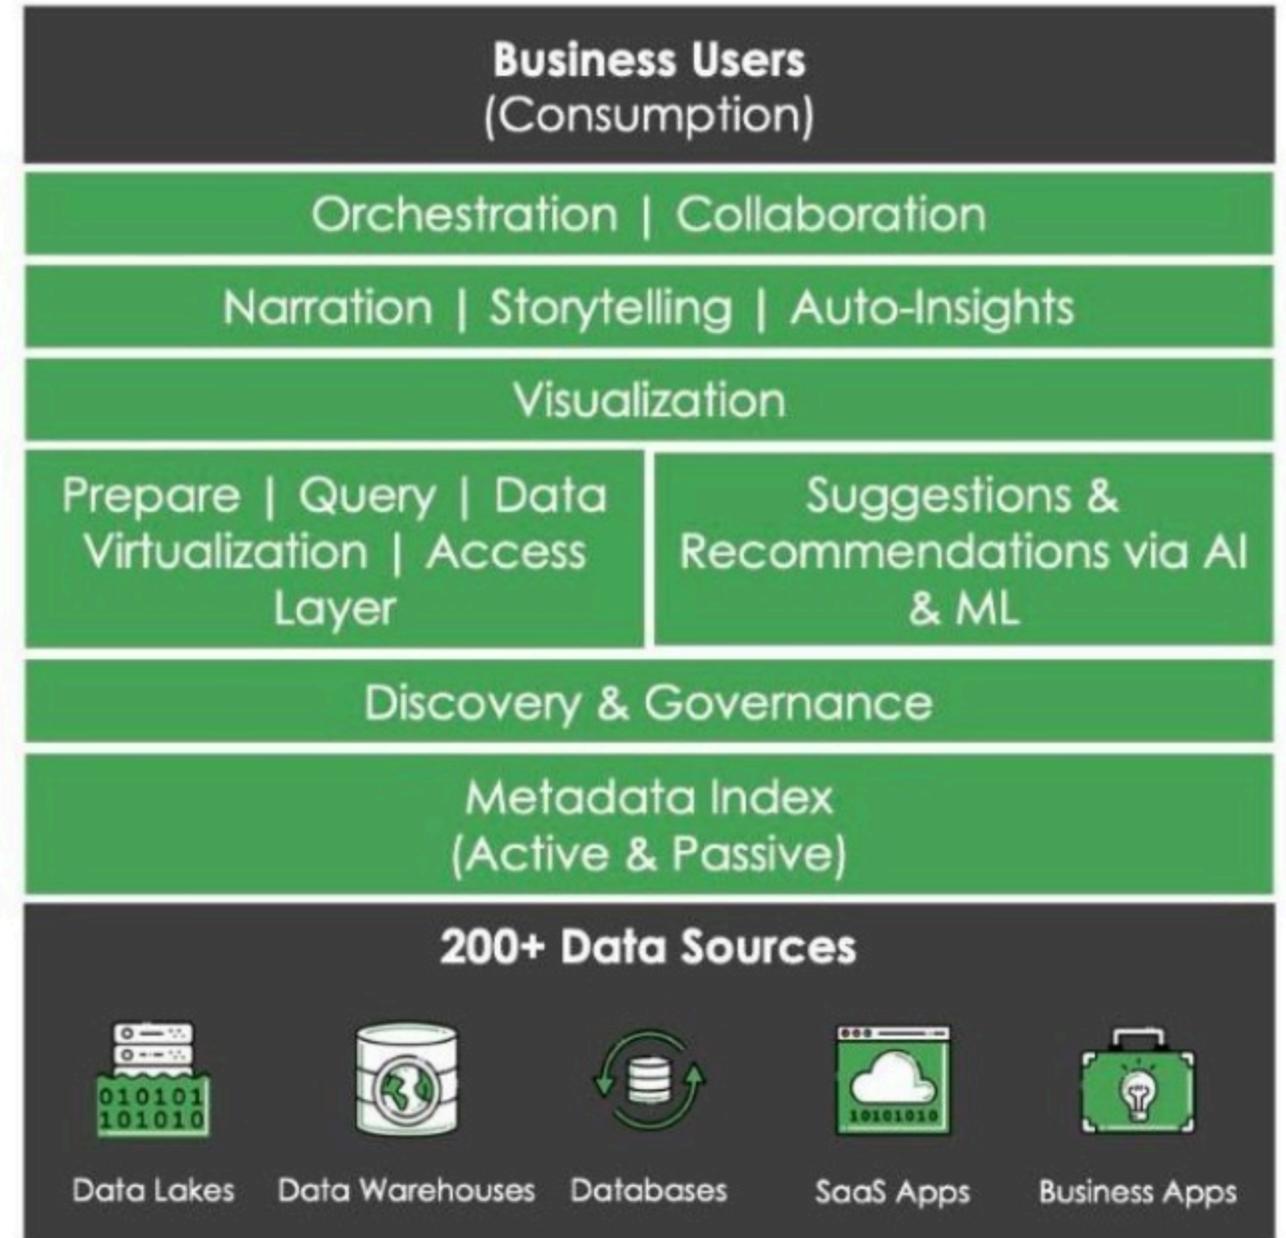

Security

Fine grain access control
Masking
Encryption

Solution:

Get answers **Fast** without the upfront cost & complexity

One UI | No Code

Why Now:

Foundational technologies have matured

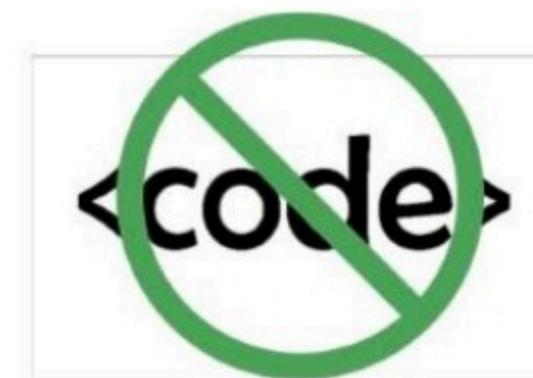

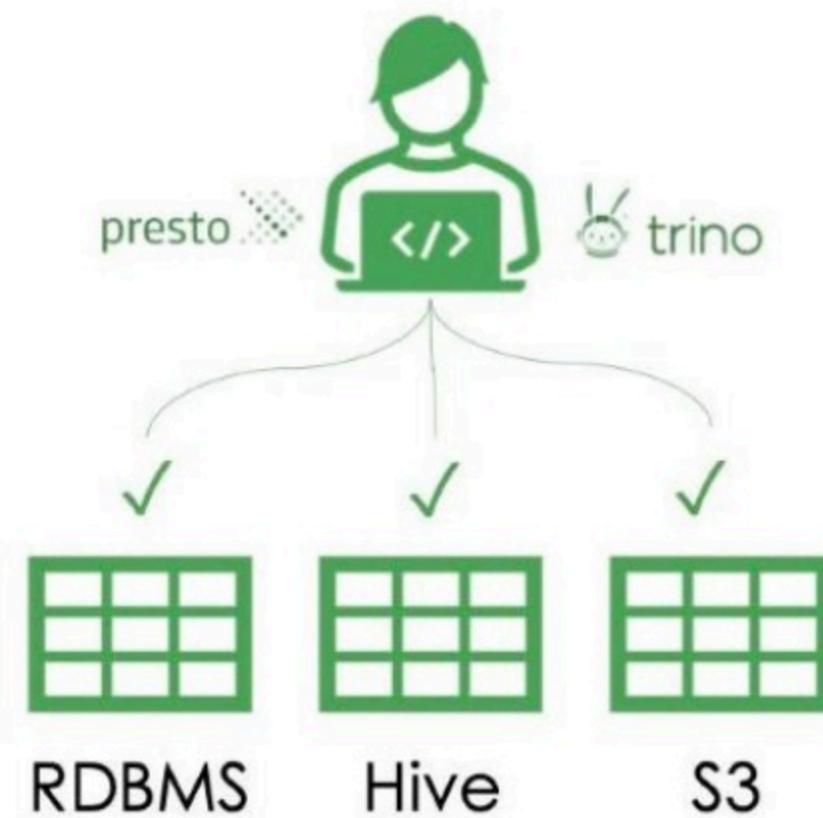

Robust APIs available across multiple sources

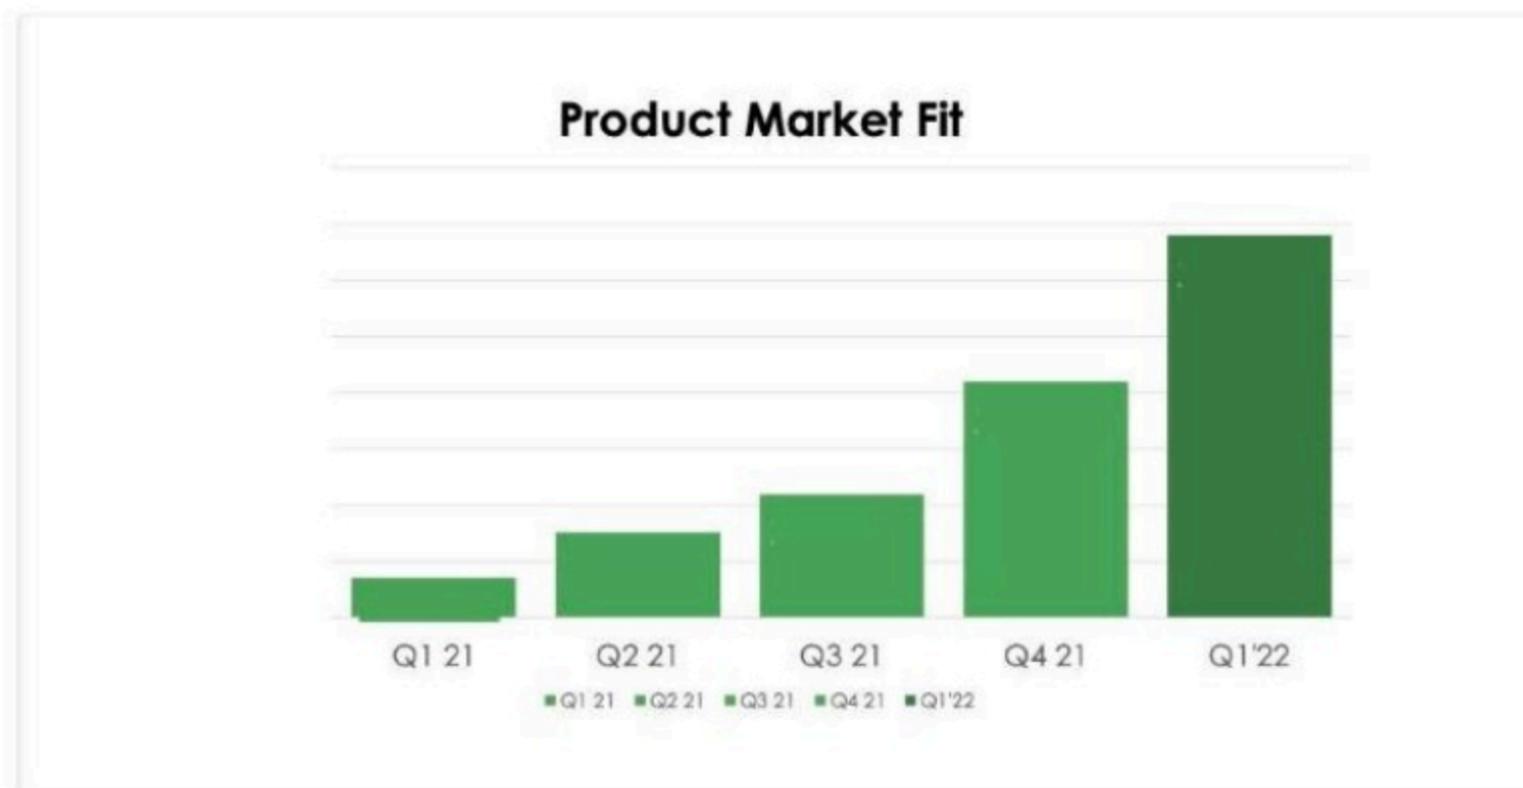

Data Virtualization security & performance improved

No Code platforms have enabled self-service

GTM Motion & Traction: Proven foundation

- ### GTM Clarity = Ready to Scale
- ✓ **Buyer:** Buyer Type
 - ✓ **User:** User Type
 - ✓ Repeatable sales motion
 - ✓ Referenceable Customers
