

# Dev 1st AppSec Management Platform

2021

TROMZO

**Our mission is to eliminate the friction between developers and security so you can scale your application security program.**

We imagine a world where security becomes self-service and developers are able to effortlessly determine security measures appropriate for their work and tune out the noise. A world where security becomes a first-class citizen in developer workflows and security teams are empowered to do meaningful work. This is what the future of application security will look like. To build this vision for the future, we've assembled an incredible team at Tromzo and partnered with top notch CISOs and Investors.

# Modern Software Pipeline

## Total Visibility

Unified Risk View Of All Software Assets

## Continuous Security

Adaptive Security Policies & CI/CD Guardrails For Security Assurance

## Workflow Automation

Playbooks For Automated Testing, Prioritization & Remediation Workflows

### Security

Automate comprehensive security testing within CI/CD and gain real time risk view of all software assets from code to cloud.

### Compliance

Ensure compliance of every commit, PR and release in real time, eliminating manual audits, questionnaires and time taking evidence collection.

### Developer

Build security early in the development lifecycle and fix security bugs before pushing code to production.

Tromzo was founded by Harshit Chitalia and Harshil Parikh. Harshil previously led security for Medallia where he experienced first hand the challenges of scaling an application security program to keep up with modern development.

Harshit led an engineering at Juniper Networks where he experienced the frustration of security teams sending endless lists of security bugs with no way to prioritize the ones that actually mattered.

The two founders joined forces in early 2021 and set out to eliminate this friction between developers and security by empowering AppSec teams to find and fix their most critical vulnerabilities.

## Nico Valcarcel

Product Security Lead, NextRoll

"My team is always looking for ways to provide visibility of security issues and provide engineering with all the information they need to shift security left and automate processes. With Tromzo we can run automated remediation campaigns around the most important issues and getting the right information to the right engineers quickly, allowing them to take action without wasting time or depend on my team to handhold them through it."

## Allan Swanepoel

Principal Security Architect, Druva

"You can't make large scale progress if you are manually managing your AppSec program. My philosophy is that any mundane tasks should be automated. This is why I love that Tromzo can automate triaging, prioritizing, ticketing, and tracking."

## Steve Dotson

CISO, Acoustic

"I've needed a tool like this that helps me to provide visibility across our disparate tools, scale our remediation efforts, and reduce friction with developers & product managers. I love having a single source of truth that these different teams can interact with to reach our goal of reducing AppSec risk"

## Ralph Pyne

VP of Security, NextRoll

"Tromzo enables my team to partner with the Dev team at scale to reduce our overall risk. Both teams benefit with my security engineers freed up to focus on higher value tasks and the dev team given rapid intelligence on prioritized vulnerabilities."
