Vulcan Cyber Remediation Orchestration

From vulnerability found,
to vulnerability fixed.

VULCAN.

Why Vulcan Cyber?

About Us

- Founded in Feb. 2018
- Offices in Tel Aviv, San Francisco, Austin
- 40 people and growing
- 500% YoY ARR growth
- $35M raised

Fixing Vulnerabilities is a Higher Priority Than Ever, Yet Most Breaches Still Involve Unsolved Vulnerabilities

99%
of vulnerabilities exploited in 2020 will be previously known to security teams

Time to exploit reduced from 30 days to
7 days

80%
of public exploits are published before their CVEs

60%
of breaches in 2019 involved unpatched vulnerabilities

Fixing a Single Vulnerability Requires Complex Processes and Way Too Much Time

Security teams coordinate with IT and DevOps teams
to fix each vulnerability, one at a time:

Scan & discover vulnerabilities

→

Consolidate & prioritize vulnerabilities

→

Research & identify the right solution and its business impact

→

Collaborate with the vulnerable asset owner **& provide relevant data**

→

Manage & analyze the fixing process, and handle rejections

VULCAN.

Fixing a Single Vulnerability Requires Complex Processes and Way Too Much Time

Today's tools don't help get fix done:

| 1 Scan & discover vulnerabilities | → | 2 Consolidate & prioritize vulnerabilities | → | 3 Research & identify the right solution and its business impact | → | 4 Collaborate with the vulnerable asset owner & provide relevant data | → | 5 Manage & track the fixing process, and handle rejections |

Vulnerability management tool focus today

Manual, complex & resource-intensive
(existing vulnerability management tools don't help)

VULCAN.

Just Fixing A Single Vulnerability Requires A Crazy Process And Takes Tons Of Time

Today, security teams need to coordinate with both IT and DevOps teams
to fix each vulnerability, one at a time:

**Running around trying to resolve all these vulnerabilities
is costing businesses big-time.**

*" In 2019, companies spent 443 hours per week on average – or approximately ten
full-time employees – managing the vulnerability response process"*

Ponemon
INSTITUTE

Scan   & track
vul   cess, and
                                                      jections

Where VM solutions on the
market today focus

Manual, complex & resource-intensive
(so most existing VM solutions don't even touch it)
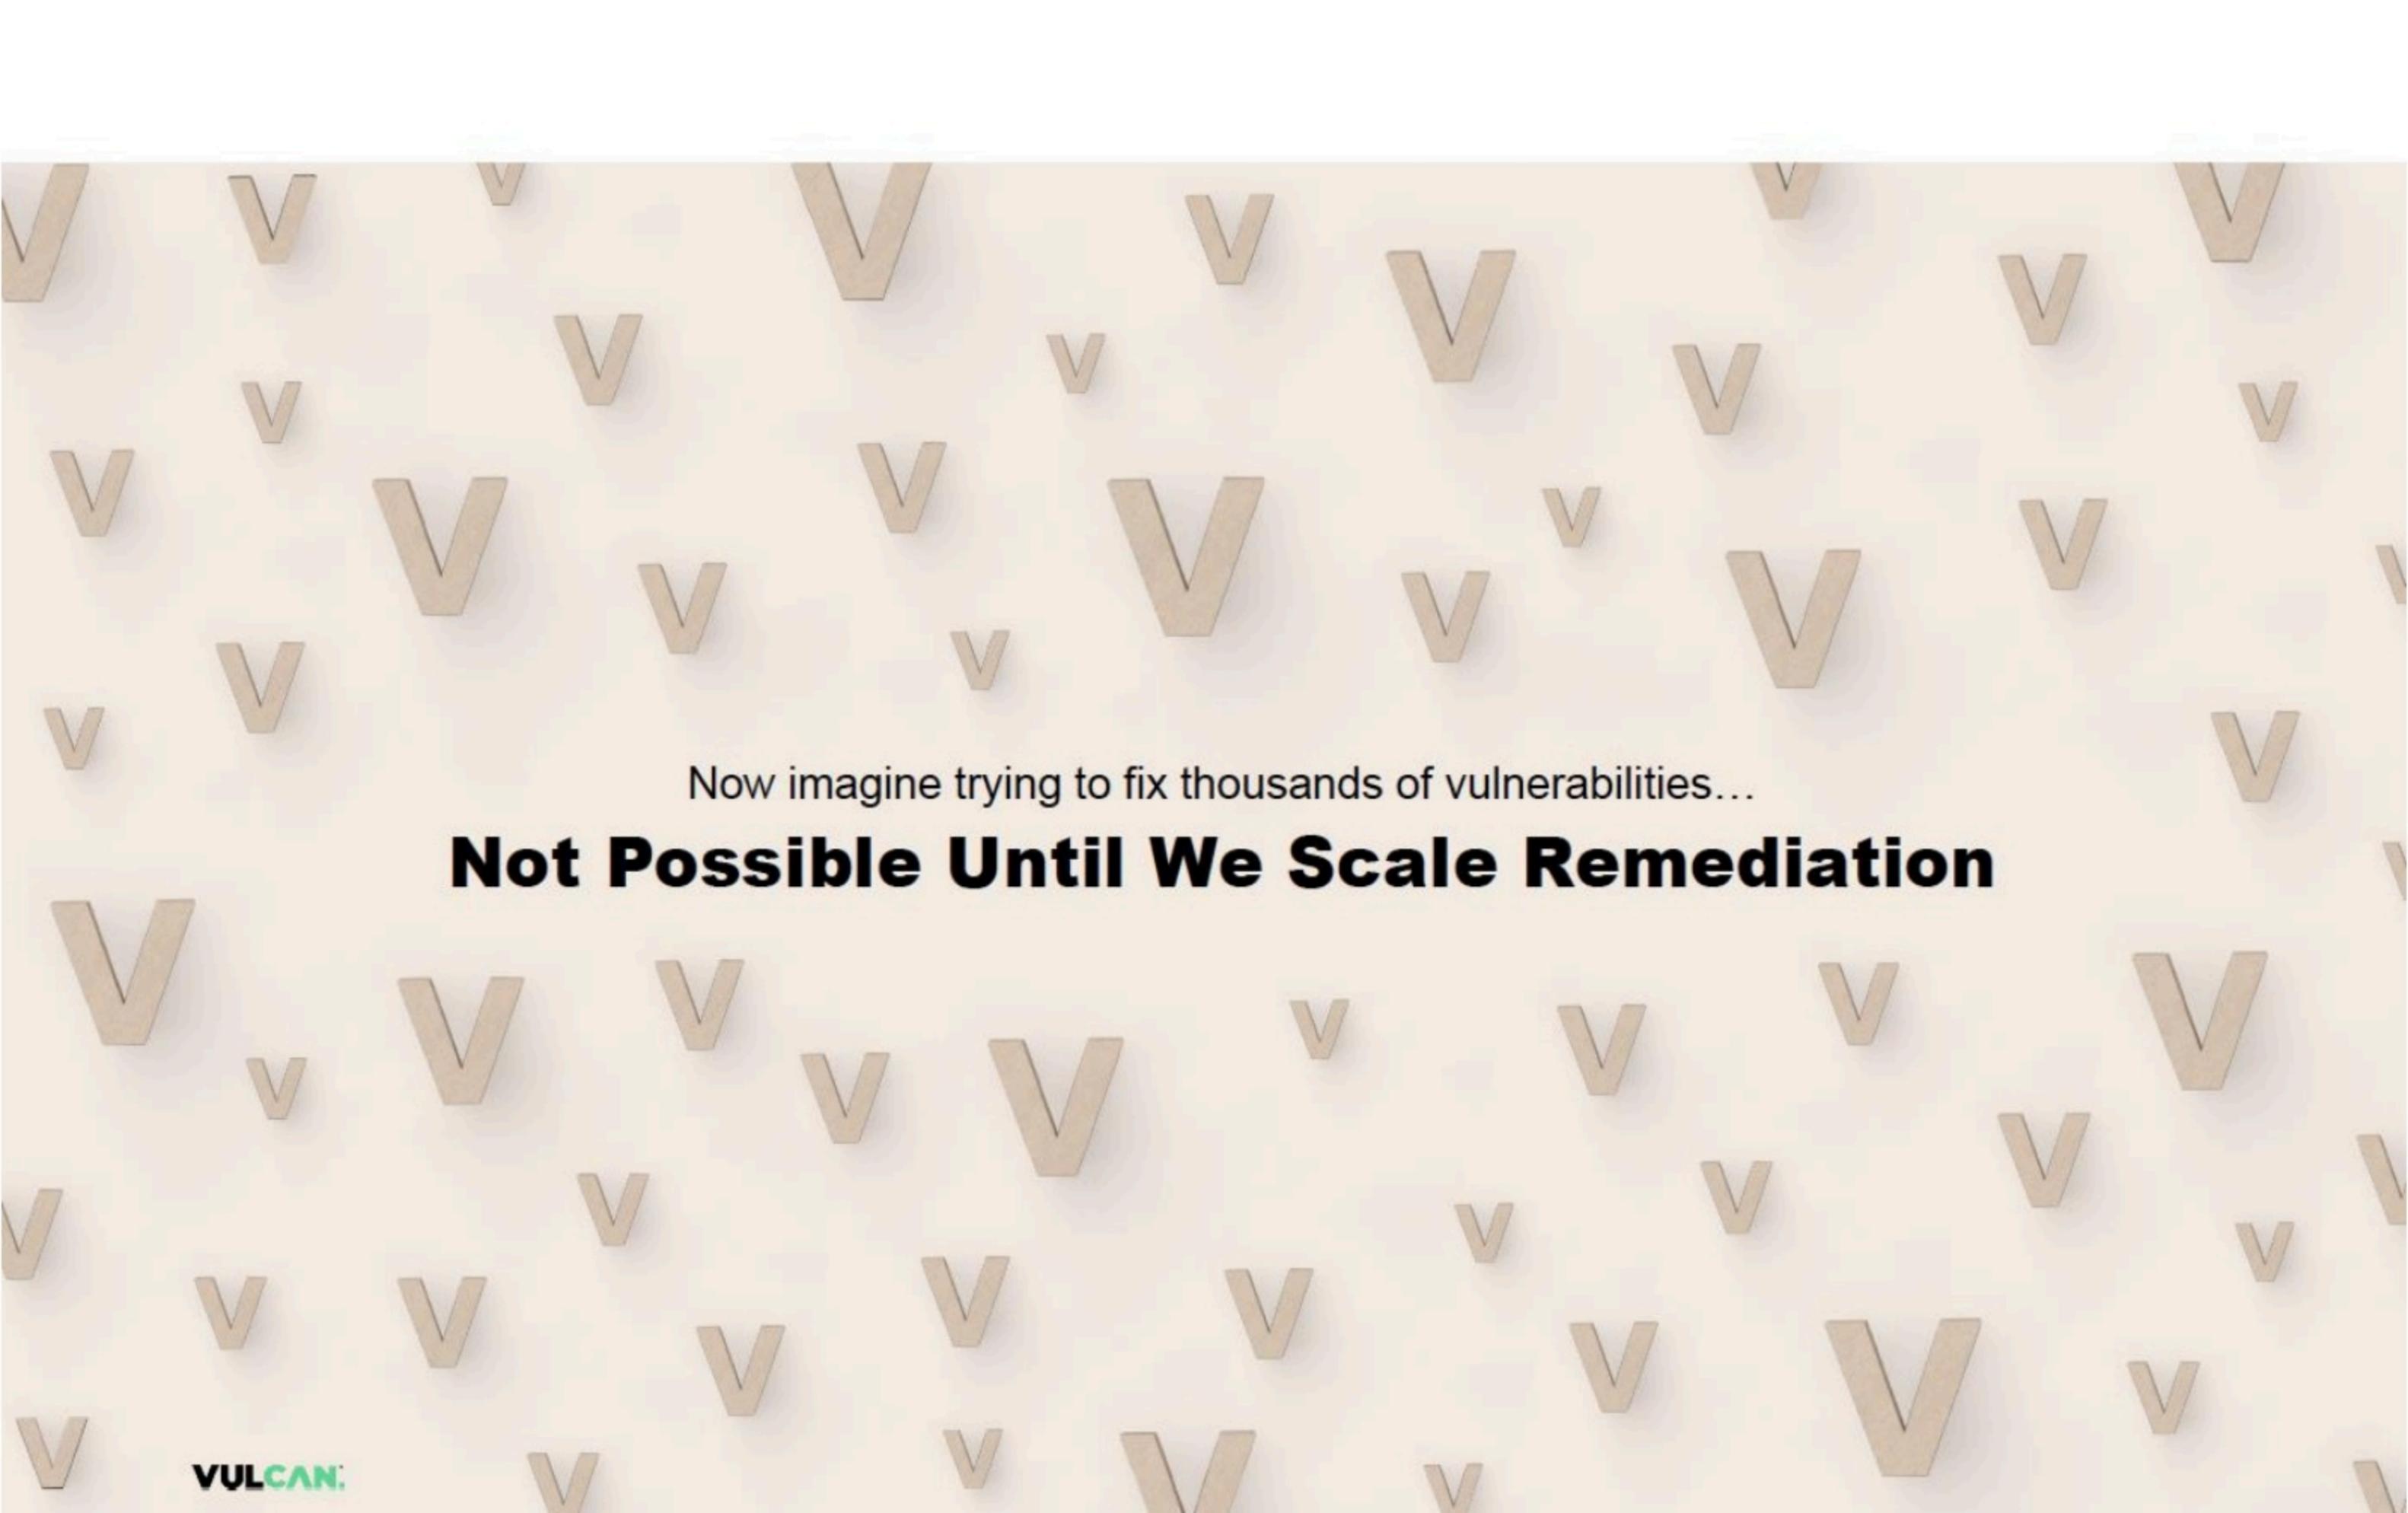

VULCAN.

Now imagine trying to fix thousands of vulnerabilities…

Not Possible Until We Scale Remediation
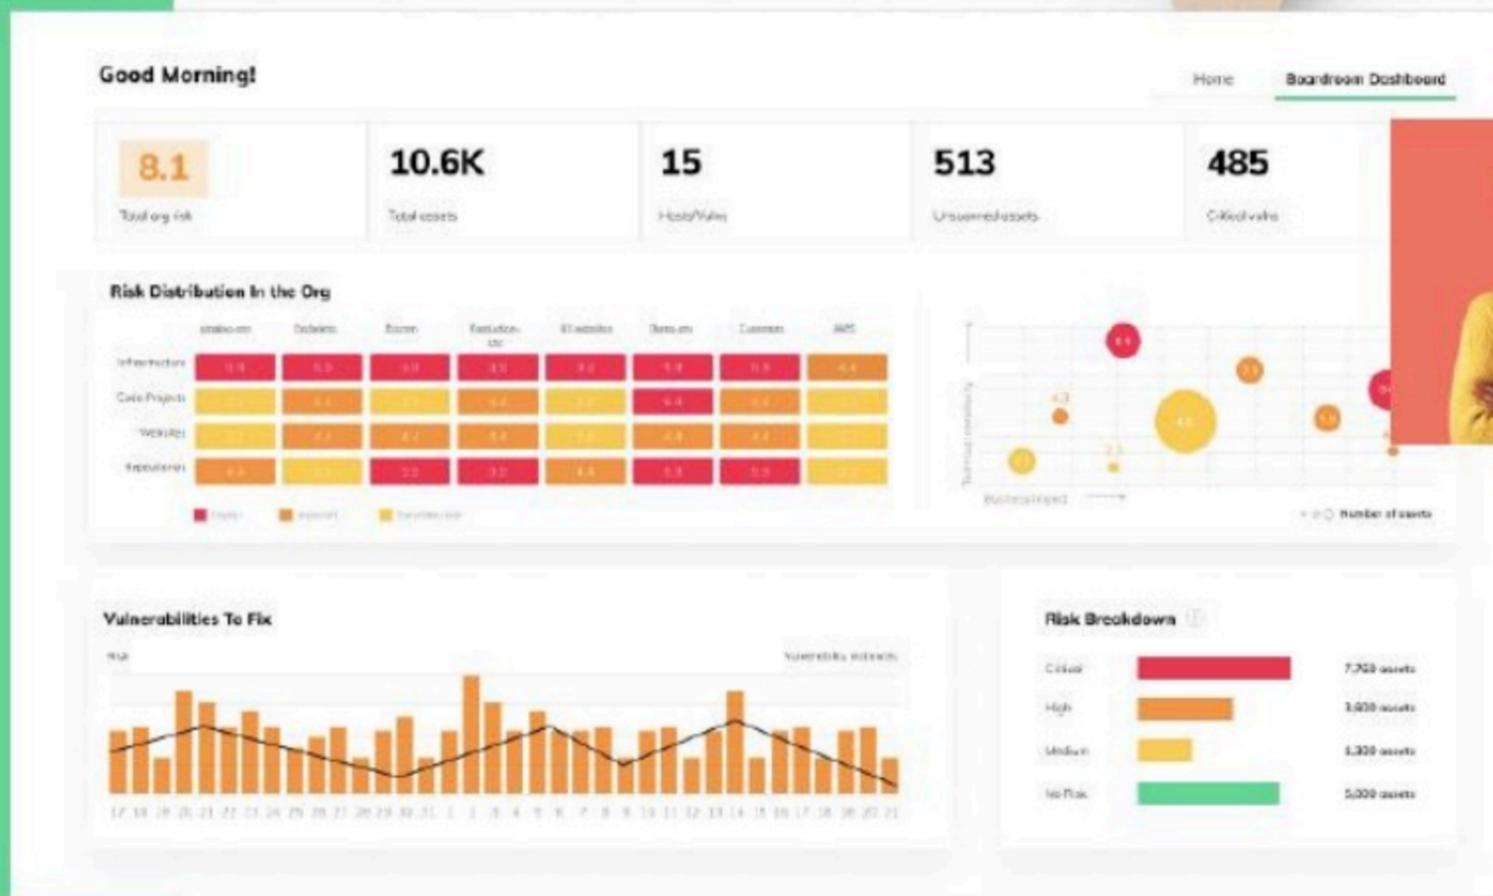

The Vulcan Cyber Vision

Get Fix Done

Remediation Orchestration by Vulcan Cyber

The vulnerability management platform built for **remediation.**

By orchestrating the entire remediation process from start to finish, Vulcan ensures that vulnerabilities aren't just found, they're fixed.
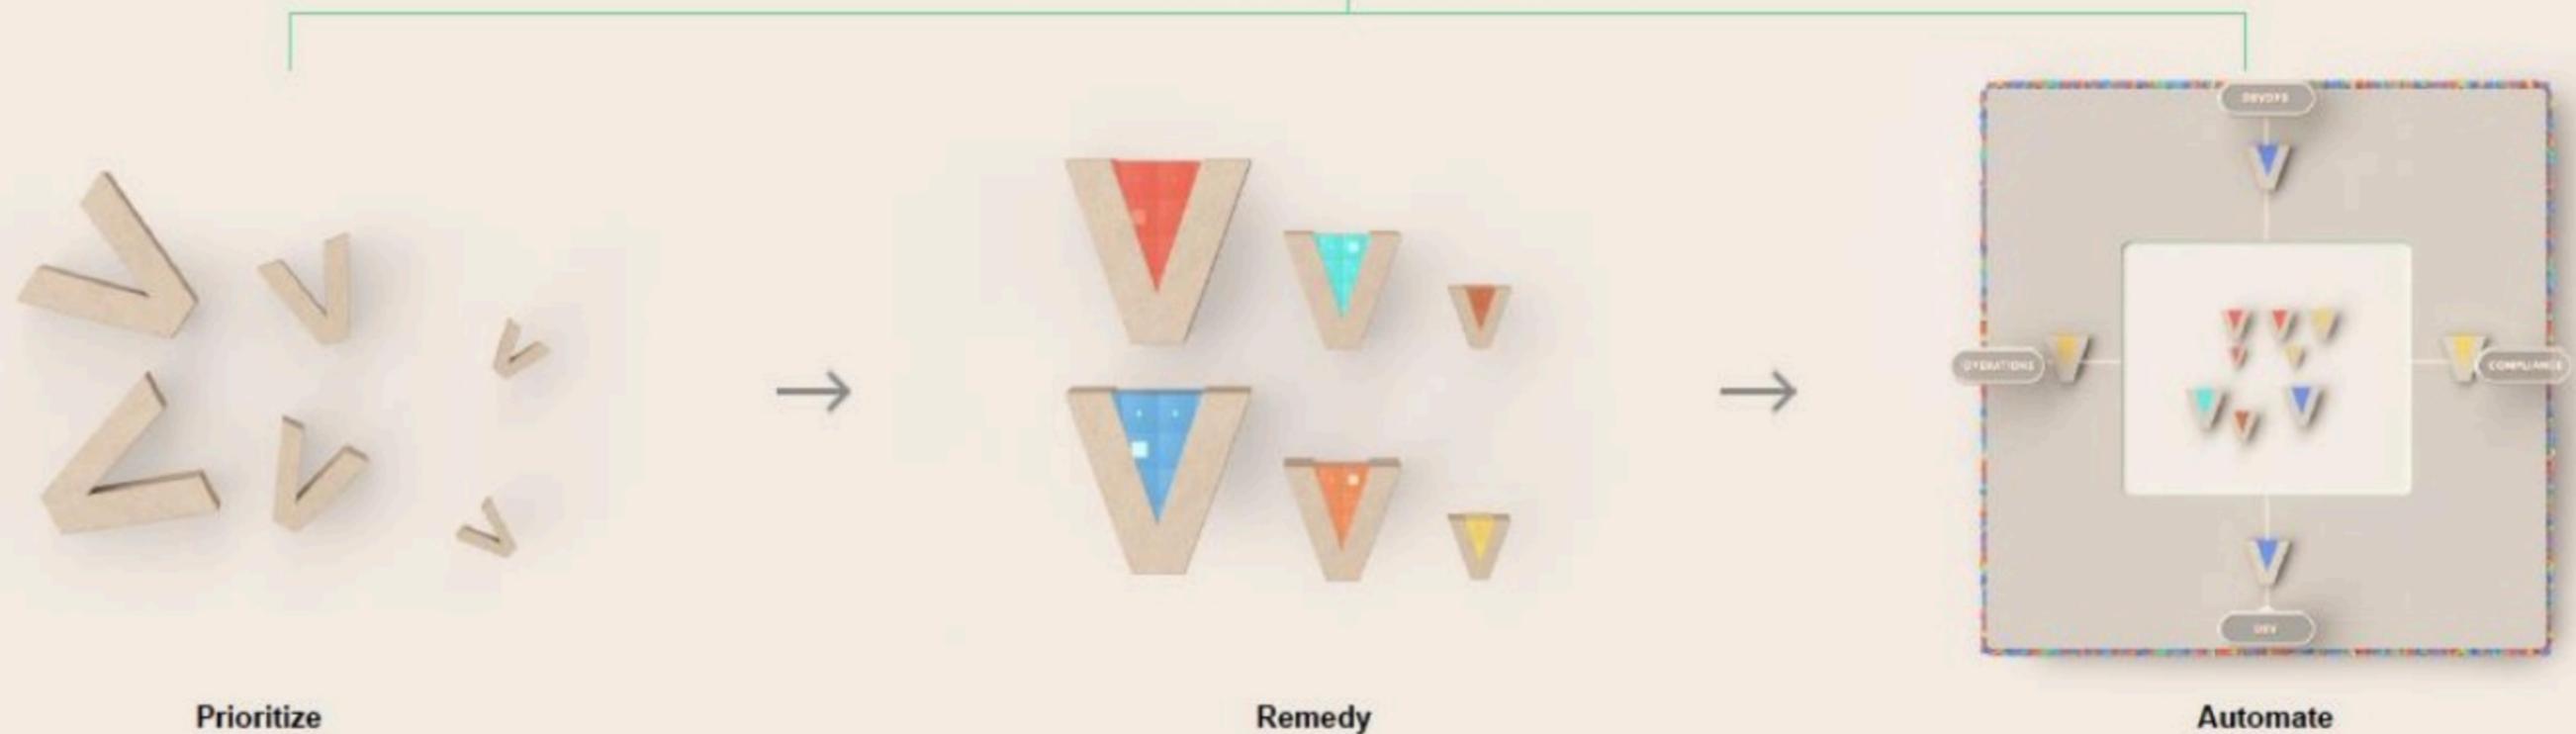

VULCAN.

Defining Vulnerability Remediation Maturity

STAGE
1
REACTIVE
Manage vulnerabilities on a case-by-case basis

STAGE
2
DATA-DRIVEN
Driving actionable insights from vulnerability, asset threat and remediation data

STAGE
3
ORCHESTRATED
Remediate vulnerabilities at scale and speed

STAGE
4
TRANSFORMATIVE
Rally business and product stakeholders around cyber-hygiene

VULCAN.

The Vulcan Solution

Give security and IT operations teams the exact priorities,
remedies & automation they need to fix at scale.

Orchestrate & Analyze

Prioritize

Remedy

Automate

Delivering Remediation When Vulnerability Management Falls Short

VULCAN.

The glue that enables E2E remediation
[example Vulcan integrations]

| Scan data	Asset data	Ticketing	Collaboration	Deployment, Patch and Configuration Management
tenable	Google Cloud Platform	Jira	Slack	CHEF
snyk VERACODE	aws	servicenow	GitLab	Microsoft Intune ivanti
Twistlock	servicenow	bmc	Teams	CROWDSTRIKE
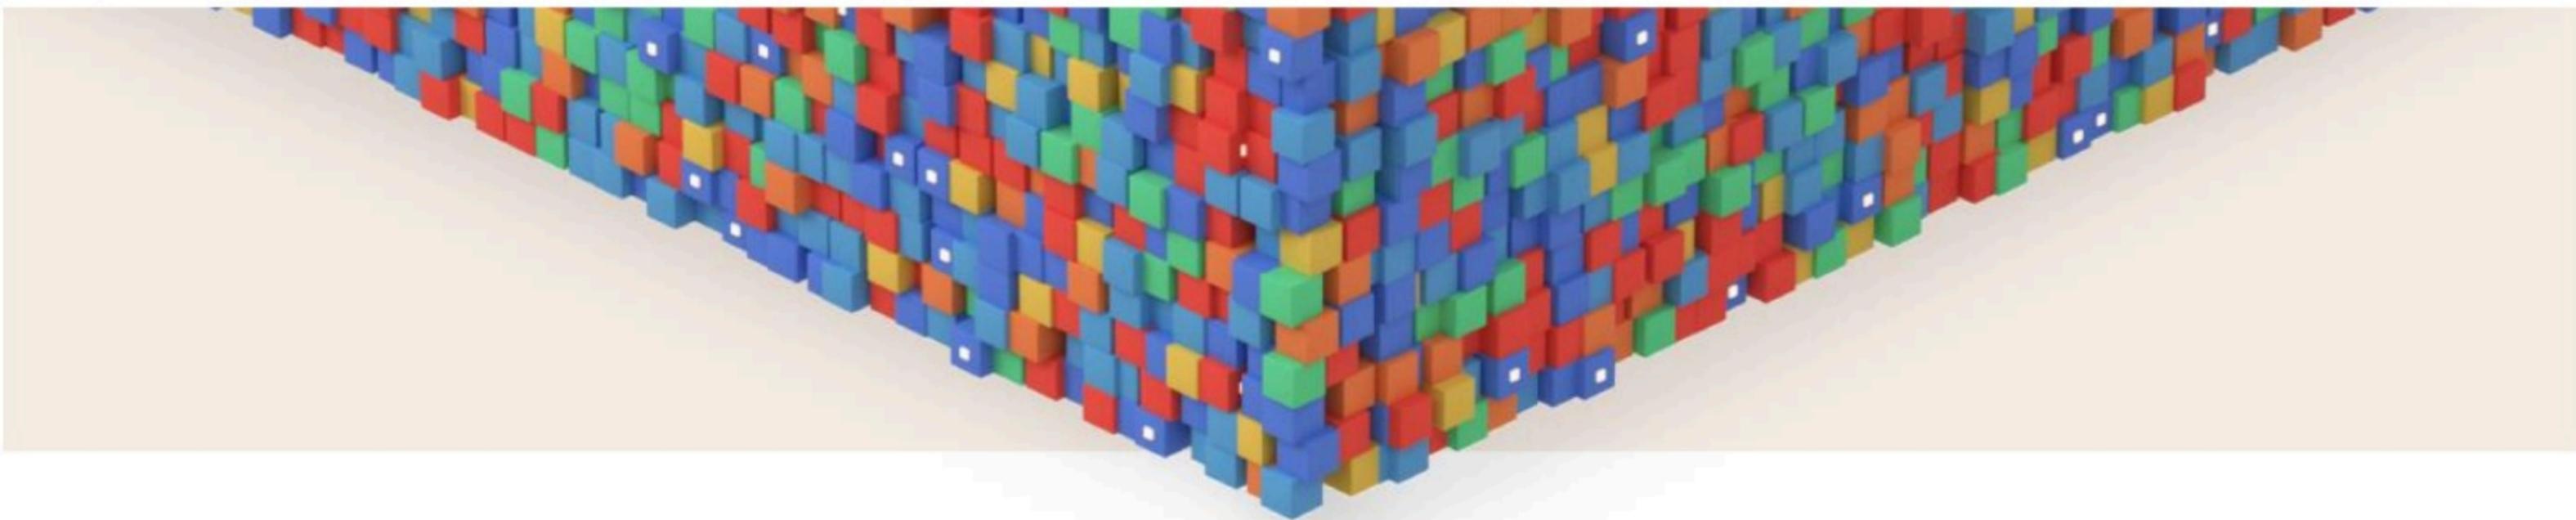

Vulcan Free and Remedy Cloud Free

The most-comprehensive collection of freemium cyber security tools for risk-based vulnerability management, prioritization, and remediation intelligence.
